

GLASS SAFETY TIPS AND TRICKS

NOTICE: This high-quality shower door glass is tempered for safety, but it is glass and therefore, it can break. Treat it with care!

- Make sure corner protectors remain on glass during installation
- If the glass ever needs to be adjusted, make sure to put the corner protectors back on all glass panels before removing the glass, and make sure to wear goggles and gloves
- Never allow the glass to make direct contact with hard surfaces such as ceramic tile, stone, metal or concrete
- Keep all hardware firmly tightened
- Make sure all bumpers are installed per instructions
- Avoid slamming the doors (be sure to tell the kids!)
- Never put excessive weight on the knobs or towel bars (again, tell the kids!)
- If the glass drags or does not bypass or swing out with ease, adjust the door immediately. Please see Installation Guide for directions
- Routinely check the door(s) to ensure everything is functioning as intended
- Make sure to follow all recommended care and cleaning information
