

Single hammock with spreader bars 

Fruta mango FRR11-5

LA SIESTA single hammock with spreader bars FRUTA likes to be outside all summer! FRUTA is manufactured of HamacTex® (polypropylene) that makes for a weather-resistant fibre with exceptional drying properties. HamacTex® feels and looks a lot like cotton, which makes it the perfect alternative for the outdoors.

The spreader bars of this hammock are produced from top-grade wood from well-managed forests (FSC®). Fortified selvages are produced by doubling the weft thread.
