## **⚠** WARNING

- Observe all governing codes and ordinances during planning and installation. Contact your local building department for further information.
- This appliance must be installed in accordance with the accompanying installation instructions.
- DO NOT install an additional in-line or external blower to increase the length of the duct run. Even small differences between blower air flow rates can greatly reduce the air draw of the hood.
- Chimney can accommodate up to 10" round duct work
- Unit can be installed to exhaust through the ceiling or through the rear wall (see diagram above).

**REAR EXHAUST DIAGRAM** 

**IMPORTANT:** The minimum installed distance from the hood to the cooking surface <u>must</u> be no less than 30 inches. The minimum specified distance may be higher for the particular range or cooktop in use. Check the manufacturers specifications for the cooktop or range.

#### **Maximum Duct Length**

The maximum straight duct length for the hood is 50 feet. To determine the actual maximum duct run, subtract the equivalent length of each elbow, transition and cap from 50 feet. See the **Duct Planning Guide** or the installation instructions for more details.
