CONVECTION MICROWAVE OVEN INSTALLATION INSTRUCTIONS

NOTE:

1. Base must be capable of supporting 200 pounds (90.7 kg).
2. Make sure base is level and front of cabinet is square. If the cabinet base is not level, the oven will tend to slide out when opening the door.
3. Provide an opening in the wall or cabinet as indicated in Illustration 1. The depth should be a minimum of 20 1/8" (51.1 cm). The floor of the opening should be constructed of plywood strong enough to support the weight of the convection microwave oven (about 100 lbs.) and should be level for proper operation of the oven.

NOTE: While the proper functioning of the convection microwave oven does not require that the opening be enclosed (with sides, ceiling and rear partition), this may be required by local code, and it is suggested that the local code be checked for any such requirement.

4. Outlet should NOT be in the shaded area as indicated on illustration 1a. At the rear of the opening, provide a 3-pronged, polarized, electrical outlet, 115-120 volt AC, 15 amp or larger.
5. Minimum required distance between the convection microwave oven and the wall oven should be 2-inches.

EXHAUST DUCT ASSEMBLY

1. Insert the edge of DUCT (B) into the hold lip of DUCT (C). Secure together by using a SCREW (A) provided in the kit. Remove the existing screw (#1) at upper right rear of the oven and secure DUCT (C) with the screw (#1) just removed from the oven. Secure DUCT (B) with SCREW (A) through the duct and into the original screw hole in the oven. See illustration 2.
2. Position DUCT (A)-1 on the top of the oven inserting edge of DUCT (BC) assembly into hole lip of DUCT (A)-1. Tighten two SCREWS (A), securing DUCT (A)-1 to DUCT (BC) assembly. See illustration 3.
3. Position DUCT (A)-2 on top of the oven and insert it into DUCT (A)-3. Secure DUCT (A)-2 using three screws (A) provided. See illustration 4.
