PLUGMOLD®
PLUG-IN UNITS
INSTALLATION INSTRUCTIONS

WARNING: For maximum safety, Plugmold Plug-In Units are equipped with a grounding type plug (3-prong) for use only with grounding type receptacles. Modification of the plug to allow its use in non-grounding receptacles voids the warranty and may lead to electrical shock.

Legrand/Wiremold electrical systems conform to and should be properly grounded in compliance with requirements of the current National Electrical Code or codes administered by local authorities.

All electrical products may present a possible shock or fire hazard if improperly installed or used. Legrand/Wiremold electrical products may bear the mark of a Nationally Recognized Testing Laboratory (NRTL) and should be installed in conformance with current local and/or the National Electrical Code.

INSTALLATION:

1. Determine the installation location and rotate the Plugmold Plug-In Unit to the necessary orientation as follows:
   a. Loosen the 2 phillips head screws near the plug blades. Do not fully remove the screws.
   b. Pull the rotating section of the plug outwards and rotate to the desired orientation. The Plugmold Plug-In Unit will rotate in 90° increments only.
   c. Push in the rotating section of the plug and tighten the 2 phillips head screws.

2. Plug the Plugmold Plug-In Unit into the desired receptacle, hold securely, and mark the wall on top and bottom of the Plugmold Plug-In Unit where the mounting clips will be installed.
3. Unplug the Plugmold Plug-In Unit and install the mounting clips on the wall. IMPORTANT – if the flat head screws furnished are not used, the substitute fasteners must also be of the flat head type, or the unit will not seat securely in the mounting clips.

4. Plug the Plugmold Plug-In Unit into the receptacle and snap into the mounting clips.
