

Lock and Handle INSTALLATION INSTRUCTIONS

NOTE: Strike plate and key cylinder screw match your door color and are found in the closer kit. Handle style may vary.

Drawings in this instruction show a right hinge installation.

Tools Required

- Phillips screwdriver #2
- Allen wrench (provided)

Handle Parts Illustration

1 Remove lock body from edge of door and remove packaging.

Left Hinge Installation

Right Hinge Installation

2 Right Hinge Installation: go to Step 3.
Left Hinge Installation: change the latch orientation.

- Lift up on locking tab.
- Push latch bolt through the mortise plate.
- Rotate latch bolt 180 degrees.
- Release latch bolt back through the mortise plate.
- Release locking tab and ensure it returns to its original position.

3 Install lock body with attached screws.

4 Insert key cylinder.

5 Assemble: Exterior handle, black bushing, exterior face plate, and flat washer.

Choose your exterior handle. Scroll handles can point up or down.

Note: Black bushing may be pre-assembled to handle.

6 Secure with retaining clip.

7 Insert spindle.

8 Tighten set screw with provided Allen wrench.

9 Loosely assemble: interior handle, black bushing, interior face plate, and exterior assembly. Install key cylinder screw, found in Bag C in the closer kit.

Note: Black bushing may be pre-assembled to handle.

Qty. 1 Key Cylinder Screw #10-32 x 1-1/2" Flat Head color matched to hardware

Actual Size

10 Hold handles together and tighten interior set screw. Secure with face plate screws.
