ASSEMBLY AND INSTALLATION INSTRUCTIONS

- 1) Lay rack body on firm surface. Protect surface with corrugated box if necessary.
- 2) Identify the four "Upright Arms." Using the 5/16" x 3/8" button head screws attach the upright arms to the rack body as shown. Do not fully tighten screws at this time.
- 3) Locate the "Top Bar" and attach to the four "Upright Arms" as shown in drawing using the two 5/16" x 7/8" button head screws and the two 5/16" nuts. Tighten all screws at this time.
- 4) Your Rack may be carefully anchored into solid wood of the ceiling joist or beams. If you are mounting in anything other than solid wood, use the Toggles provided and follow the directions in the kit. Carefully measure the area where the rack is to be hung and install the ceiling screw hooks (approximately 16" apart) if you are mounting in wood or the Toggles if you are mounting in anything other than wood.
- 5) Place the four grid brackets over the sides of the rack, just inside each of the upright arms with the straight end of the brackets facing towards the inside of the rack. Next place the grid on top of the grid brackets. (See note and drawing next page).
- 6) Insert the "S" hooks into each of the remaining holes in the top bar and the other end through one end of the chain. Carefully lift your rack into place and attach the other end of the chain onto the ceiling screw hooks.
- 7) Hang your heavier item on the straight portion of the rack body or the center of the grid area.
- 8) All of our hammered steel racks are finished with an industrial wax designed to give years of protection to the rack. Cleaning is easily done with a damp cloth. Dry thoroughly after cleaning. If a touch-up is ever needed we recommend a "Pledge" like wax product

Note: Grid as shown in drawing is upside down for illustration purposes. Please turn grid over so crossbars that extend the width of grid are facing down. This will help to keep grid from sliding out of position when rack is in use.

It is important that your rack is assembled correctly. If the unit is assembled or used incorrectly, it could become unstable and collapse, possibly causing injury.
