1. How your solar powered fixture works

During the day, the solar panel converts sunlight into electricity and recharges the battery. At night, the light turns on automatically using the electricity stored during that day.

The number of hours the light stays on depends on your geographical location, weather conditions and seasonal sunlight availability.

Place the solar light fixture in an area where it can receive direct sunlight for at least 8 hours each day. Shadowed locations will not allow the battery/batteries to charge fully and will reduce the hours of nighttime lighting. The selected location should not be near nighttime light sources, such as porch lights, street lights or pool lights, as these may cause the solar light to turn off prematurely.

2. First time use

- Slide the switch to the ON position to turn the candle on.
- The candle will turn on automatically at night.
- To turn the candle off at dusk, slide the switch to the OFF position.
- Place the top on the lantern by aligning the red dots located under the lantern top and on the lantern body. (1a)
  
  **Note:** The top will not be aligned with the base at this time. (1b)

- Secure the lantern top to the lantern body by turning it clockwise until the connectors click in place. (1c)
- For best operation keep solar panels clean by wiping with a soft cloth.
3. Battery replacement

NOTE: This operation should be done in the morning on a sunny day. This will allow the lantern to receive a full 8 hours of sunlight so that the rechargeable battery can reach maximum capacity.

- Remove the top the of lantern by turning it counterclockwise.
- Remove the battery cover by pushing in the release tab and pulling it upward.
- Remove the old battery and replace it with a new AA size 1.2V rechargeable battery of the same or greater mAh.

(USE RECHARGEABLE BATTERY ONLY).

Note: Using a soft cloth, clean the battery contacts and those of the device prior to battery installation.

- Be sure to insert the battery in the proper direction.
- Replace the battery cover.
- Refer to “First time use” for instructions on replacing the lantern top.

4. Troubleshooting

If the light does not turn on at dusk after 8 hours of charging:

- Ensure that the solar lantern is in a bright sunny location and not in a shady area during the day.
- Make sure that the light’s photocell is not affected by other light sources at night.
- Make sure that the switch is on the ON position.
- Verify that the battery is making contact with the terminal and that it has been inserted in the correct polarity.

5. CAUTION

- Safe for outdoor operation.
- Failure to insert battery in the correct polarity, as indicated in the battery compartment, may shorten the life of the battery or cause battery to explode or leak.
- Do not mix old and new batteries. Replace all batteries of a set at the same time.
- Do not mix Alkaline, Standard (Carbon-Zinc) or Rechargeable (Nickel Cadmium) or (Nickel Metal Hydride) batteries.
- Do not dispose of batteries in fire.
- Batteries should be recycled or disposed of as per manufacturer’s recommendations.
- Remove battery if consumed or if product is to be left unused for a long period.
- REPLACEMENT PARTS MAY BE ORDERED BY USING THE FIXTURE MODEL NUMBER AND THE PART’S NAME.
