Generac asked consumers what they wanted from a power washer. They told us they needed cleaning power, reliability and—above all—ease of use. In a

compact unit that they could afford. We designed and built our new line of power washers specifically to meet those needs.

I want the pump to be easy to reach, so that I can easily connect the hoses.

Because every Generac power washer features a Generac horizontal-shaft OHV engine, the pump is at the same level as the engine, making hose connections easy—unlike vertical-shaft engines, where the hose connections are beneath the engine and more difficult to reach.

We designed our power washers so the engine and pump are perfectly

balanced over the axle for almost effortless maneuverability, regardless of the terrain. And the Generac horizontal-shaft OHV engine ensures that the pump and hoses are kept well above the ground, avoiding snags. It also means you can easily gather the hoses when maneuvering the unit during operation.

I need to be able to easily move the pressure washer when I'm using it.

POWER

Generac first designed and built air-cooled engines in the early 1990s for our portable generators. Every one of our power washers features a Generac horizontal shaft OHV engine

with low-oil shutdown—not featured on vertical-shaft engines. As for power, every Generac power washer has the largest engine on the market for its pressure rating.

Generac designed the spray gun with ergonomics in mind. The cushion grip helps reduce fatigue. You can hold the easy-to-pull spray trigger with minimal effort. And on our larger units—3000 PSI and above—the spray gun comes with an adjustable side handle for

additional comfort and control when cleaning up high, down low or anywhere in between.

COMFORT

residential

ergonomic generac spray gun

- · Cushion grip for comfort
- Easy-to-pull trigger reduces fatigue
- Rear hose connection for maximum convenience

High-performance

- Thicker cushion grip for extended use
- Longer barrel provides added stability
- Easy-to-pull trigger reduces fatigue
- Rear hose connection for maximum convenience

- Axial cam pumps are easy to access.
- · Integrated spray gun holder keeps spray gun secure during transport.

frequently asked questions

What is a power washer?

A power washer is an outdoor power tool that makes cleaning easier by using a high-pressure spray of water to clean a surface. A gasoline engine or electric motor drives a pump, which delivers water using your home's water supply. The water enters the pump, is pressurized inside the pump, and exits the pump at as much as several thousand PSI, depending upon the unit.

The force of the high-pressure spray loosens dirt and flushes it away. On more professional-grade models, the spray is even powerful enough to strip paint, which is useful in paint preparation. You can use many detergents with a pressure washer, too, for even more effective cleaning. And there are accessories you can buy that make cleaning even easier.

What is "PSI" and "GPM," and why are they important?

Short for "pounds per square inch," PSI is a measure of the water pressure coming out of the power washer. A typical garden hose dispenses water at about 30-40PSI, and a coin-operated car wash provides about 700PSI. A power washer, by contrast, typically dispenses water at several thousand PSI.

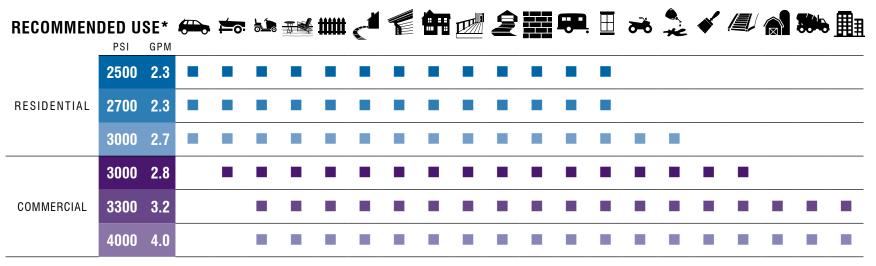

GPM stands for "gallons per minute."

It describes how much water is flowing through the pressure washer.

Together, they provide your power washer's cleaning power. PSI provides the "oomph" you need to lift dirt and grime, and GPM provides the necessary quantity of water to wash it away. Multiply PSI by GPM. The higher the number, the greater the cleaning power.

Bringing 50+ Years of Expertise to Power Washers

Generac power washers are built upon decades of knowledge designing and building power equipment. Since 1959, Generac's primary focus has been on residential, commercial and industrial generators. Then, in the early 1990s, we applied our knowledge of air-cooled engines and portable product design to power washers; it was a natural evolution. And for the first time power washers were readily available to consumers at a price they could afford. Along the way, we were granted several patents that have since changed the industry. Now we bring you an entirely redesigned family of power washers, designed specifically to meet the needs of consumers and professionals alike.

^{*}Carbon monoxide produced during use CAN KILL IN MINUTES. NEVER use indoors or in other sheltered areas, EVEN IF doors and windows are open. Only use OUTSIDE, and far away from windows, doors and vents. READ MANUAL BEFORE USE for important details on safe operation.

A TRADITION OF QUALITY AND INNOVATION

For over 50 years, Generac Power Systems has been a leader in innovative design and superior manufacturing. When it comes to developing products that are both durable and reliable, we stand head and shoulders above our competition. The result of our efforts can be seen across our many product offerings.

We design and build engine-driven power generation equipment, automatic transfer switches, control systems, air-cooled engines and power washers.

Regardless of the product, our vertical integration allows us to control the quality, availability and flow of materials throughout the manufacturing process. And each product is factory tested prior to shipment.

It is this ongoing commitment to quality and innovation that has made Generac a name that people have come to trust.

COMMITMENT TO SERVICE

Generac power washers are supported through an extensive nationwide service network that provides parts and technical support to homeowners and contractors. For a power washer dealer near you, visit generac.com.
