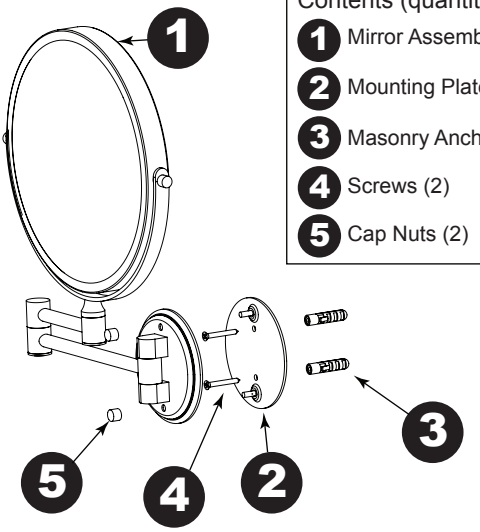
GIAGNI

Wall Mounted Mirror

Installation Instructions

MM101
Series



Contents (quantity):

1. Mirror Assembly (1)
2. Mounting Plate (1)
3. Masonry Anchors (2)
4. Screws (2)
5. Cap Nuts (2)

1. Remove the ***mounting plate*** from the ***mirror assembly*** by unscrewing the ***cap nuts.*** Do not remove the pre-assembled screws on the mounting plate.

2. Choose the mounting position. Height is the most critical since the mirror does not adjust up and down, just tilts. Allow for a comfortable position while standing with the mirror nearly at full extension. **Mounting the mirror onto a wall stud is HIGHLY recommended.**

3. Place the ***mounting plate*** on the wall in the preferred position and mark the location of the two holes. **Be sure the holes are plumb (vertically level)**.

4. For drywall: Drill two 1/8" holes to confirm stud location. If using studs, secure ***mounting plate*** to stud with two ***screws***. If not using studs, heavy-duty wall anchors are recommended (not included).

5. For masonry walls, drill 5/16" holes and use ***masonry anchors*** and ***screws*** (included).

6. Place ***mirror assembly*** onto the threaded studs on the ***mounting plate***, and secure with the ***cap nuts***.
