

# Material Estimator

## How to Plan

1. Create a sketch of the area you wish to install your fence.
2. Establish all gate(s) and/or transition locations.
3. Determine the number of six foot wide fence sections. Keep in mind that if a section is less than six feet, it will require you to trim the section.
4. Determine the number of posts. Note: all gates must be installed using gate posts.
