- Wax Ring
- T-Bolts with Retainer (2)
- Bolt Caps (2)
- Bowl-To-Floor Knobs (2)

**SOLD SEPARATELY**

- Water Supply Line
- Slow Close Toilet Seat
BACK-TO-BACK INSTALLATION

Depending upon your plumbing and venting conditions, the flow from the Champion® 4 HET in a back-to-back installation may create a vacuum on the system and draw water from the opposing bowl. The National Standards Plumbing Code prohibits the use of a cross fitting for drainage as throw over is possible. The code does approve a directional "Y" style fitting with proper venting to direct the water downward and away from the other toilet.

1. Turn Off Water Supply
2. Flush to remove water from tank; sponge remaining water from bowl before removing toilet.
3. Clean Flange

**Caution:** If leaving floor flange open for more than 1-2 hours, cover flange to prevent escaping sewer gases.

Recommended fitting type for back-to-back installations.

Press firmly.

Wax Ring (sold separately)
Apply weight evenly. Do not move after placement. Water tight seal may break.

**WARNING:** Overtightening of water supply line nuts could result in breakage and potential flooding. If the connection leaks after hand tightening, replace the supply line. Do not use any type of sealant on the water supply connection. Use of plumber’s putty, pipe dope, or any other type of sealant will void the warranty.

Connect water supply line. (Sold separately) Hand tighten nut.

**NOTE:** To ease installation, push down on the top of the tank while tightening handles.

Turn on water supply.
Adjust water level to level indicated on tank by turning water level adjustment knob to move float cup up or down.

CARE AND CLEANING

When cleaning your toilet, wash it with mild, soapy water, rinse thoroughly with clear water and dry with a soft cloth.

WARNING: Do not use in-tank cleaners. These products can seriously corrode fittings in the tank. This damage can cause leakage and property damage. American Standard shall not be responsible or liable for any damage caused by the use of in-tank cleaners.

TROUBLESHOOTING GUIDE - See Step 8 For Diagram

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Cause</th>
<th>Corrective Action</th>
</tr>
</thead>
</table>
| Does not flush | a. Water supply valve closed.  
b. Supply line blocked.  
c. Flush valve chain too loose or disconnected.  
d. Sand or debris lodged in water control. | a. Open valve and allow water to fill tank.  
b. Shut off water supply, disconnect supply line and inspect all gaskets and washers. Reassemble.  
c. Adjust chain length as required.  
d. Shut off water supply. Remove cap and clean as per Fluidmaster maintenance instructions at: www.americanstandard-us.com/enews/fluidmasterguide.pdf |
| Poor or sluggish flush | a. Bowl water level too low.  
b. Supply valve partly closed.  
c. Partially clogged trapway and/or drain pipe and/or vent.  
d. Supply pressure too low. | a. Check that refill tube is connected to water control and inserted into overflow tube without being kinked or damaged.  
b. Open supply valve fully. Be sure that proper supply tube size is used.  
c. Remove obstruction. Consult a plumber if necessary.  
d. Normal supply pressure must be at least 20 psi. |
| Toilet leaks | a. Poor supply line connection.  
b. Poor bowl to tank/floor connection. | a. Review Step 7 of installation procedure.  
b. Review Step 1 through 6 of installation procedure. |
| Toilet does not shut off | a. Flapper seal leaking or deformed.  
b. Sand or debris lodged in water control.  
c. Flush valve chain too tight, holding flapper open. | a. Clean debris from seal surface. Replace flapper seal as needed. See web for more info.  
b. Shut off water supply. Remove cap and clean as per Fluidmaster maintenance instructions at: www.americanstandard-us.com/enews/fluidmasterguide.pdf  
c. Readjust chain length as needed. |
| Toilet bowl rocks after installation | a. Wax ring not fully compressed.  
b. Floor not level. | a. Retighten bowl-to-floor knobs.  
b. Use toilet shims and/or place a bead of caulk around the base of the toilet. |
