QuARTz
ACO Shower Drain
Installation Guide
Technical & planning considerations

Accumulation and slopes
ASME A112.6.3-2001 requires a 2" outlet for shower applications. QuARTz by ACO channels have this as standard. The flow value for a 2" outlet varies depending upon the head of water above the grating.

In the case of shower channels, a head of water is not typical in practice, due to shallower floor grades. Floor drains can have a head of water due to ‘basin’ profile of floor grades.

Flow values without any accumulation (head of water) should be used when shower channels are placed around the perimeter of the shower and no shower threshold step is used.

If the shower channel is installed against a wall, there may be a small amount of accumulation (head of water) depending on the layout of the shower area. Grade of shower floor will determine depth of build-up.

Outlet flow rates (GPM)

<table>
<thead>
<tr>
<th>Grate</th>
<th>0&quot; (0mm)</th>
<th>0.2&quot; (5mm)</th>
<th>0.6&quot; (15mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Channel body only</td>
<td>6.65</td>
<td>9.51</td>
<td>11.60</td>
</tr>
</tbody>
</table>

Outlet flow rate up to 9.51 GPM based on floor grades such that 0.2" (5 mm) head of water possible.

Installation against the wall
Installation at the entrance
Outlet flow rate up to 6.65 GPM based on no water accumulation (head of water).

Outflow performance
The choice of shower channel generally depends on the flow values of the shower fitting. 70% of shower heads have a maximum capacity of less than 3 GPM.

The QuARTz by ACO shower drain standard channel has an outflow of 6.65 GPM. This value assumes no head of water above drain.

Based upon these flow rates, the QuARTz by ACO shower drain standard channel can be used in conjunction with the majority of shower head fittings.

A number of custom solutions are available to cope with shower heads with higher flow rates.

Effect of grate on outlet flow rates (GPM)

Installation overview

Tiled showers rely on waterproofing membrane beneath the tiles and grout. QuARTz by ACO offers a number of options to ensure compatibility with different floor structures.

The installation details shown set out to provide the designer with integrated solutions to wet room floor drainage identifying preparation, installation and construction processes required to install waterproof channels and floor drains in level threshold wet room environments.

Although these details do not cover every possible situation, they do provide a practical reference to most design applications.

Always consult local codes prior to installation.

1. Where alterations to floor joists are necessary, consult Structural Engineer for advice and reinforce floor joists as advised.
2. Frame out shower surround as required.
3. Connect base of flange outlet adaptor to pipe work, leaving drain bolts in place. Block drain opening with rag to prevent floor mortar from blocking pipe work.
4. Trowel mortar onto sub-floor.
5. Install CPE membrane, reinforce around outlet and cut carefully to reveal heads of drain bolts and outlet.
6. Install top section of flange outlet adaptor.
7. Test membrane for leaks.
8. Lubricate outlet spigot on shower channel (liquid soap) and push fit shower channel into outlet at correct position and height.
9. Cut plastic installation feet to height to rest on the membrane and keep shower channel at required height and level.
10. Trowel mortar to required height, allowing for thickness of tile and thin set mortar and grade to create 2% slope towards the drain.
11. After floor mortar has cured, apply thin set and install tile and grout.
12. Install grate into shower channel.
1. Where alterations to floor joists are necessary, consult Structural Engineer for advice and reinforce floor joists as advised.
2. Frame out shower surround as required.
3. Connect base of flange outlet adaptor to pipe work, leaving drain bolts in place. Block drain opening with rag to prevent floor mortar from blocking pipe work.
4. Trowel mortar onto sub-floor.
5. Install CPE membrane, reinforce around outlet and cut carefully to reveal heads of drain bolts and outlet.
6. Install top section of flange outlet adaptor.
7. Test membrane for leaks.
8. Lubricate outlet spigot on shower channel (liquid soap) and push fit shower channel into outlet at correct position and height.
9. Cut plastic installation feet to height to rest on the membrane and keep shower channel at required height and level.
10. Trowel mortar to required height, allowing for thickness of tile and thin set mortar and grade to create 2% slope towards the drain.
11. After floor mortar has cured, apply thin set and install tile and grout.
12. Install grate into shower channel.

Box out detail showing suggested dimensions.

After removing box formwork connect shower channel to plumbing pipe work.

Shower channel fitted in place prior to final concrete slurry pour. Shower channel flange should be at same level as original concrete slab.
**Installation overview**

Tiled showers rely on waterproofing membrane beneath the tiles and grout. QuARTz by ACO offers a number of options to ensure compatibility with different floor structures.

The installation details shown provide the designer with integrated solutions to wet room floor drainage identifying preparation, installation and construction processes required to install waterproof channels and floor gullies in level threshold wet room environments.

Although these details do not cover every possible situation, they do provide a practical reference to most design applications.

2. Frame out shower surround as required.
3. Connect base of flange outlet adaptor to pipe work, leaving drain bolts in place. Block drain opening with rag to prevent floor mortar blocking pipe work.
4. Trowel mortar onto sub-floor.
5. Install CPE membrane, reinforce around outlet and cut carefully to reveal heads of drain bolts and outlet.
6. Install top section of flange outlet adaptor.
7. Test membrane for leaks
8. Lubricate outlet spigot on shower drain body (liquid soap) and push fit shower outlet into correct position and height.
9. Trowel mortar to required height, allowing for thickness of tile and thin set mortar and grade to create 2% slope towards the drain.
10. After floor mortar has cured, apply thin set, install tile and grout.
11. Install grate into point drain.
Product Cleaning Instructions

**DO USE:**
- A solution made from mild soap or dish detergent & warm water
- A soft, clean cotton cloth
- Clean water to rinse then wipe dry
- Baking soda & water paste to remove oxidized stains and surface rust

**DO NOT USE:**
- Cleaning agents containing chlorides, alcohol, ammonia, alkaline or mineral spirits
- Steel wool or wire brushes
- Abrasive cleaners

Other ACO systems

- **ACO DRAIN**
  ACO Drain is the world’s leading modular trench drain system for commercial, industrial and landscape applications.

- **ACO SPORT**
  Surface drainage and building accessories for track & fields, used at Olympic sites since 1972.

- **AQUADUCT**
  Custom designs and manufactured fiberglass trench drain systems to meet individual project requirements.

- **ACO INFRASTRUCTURE**
  Surface drainage products engineered for the unique design and performance demands of highways, urban roads and bridges.

- **ACO STORMBRIXX**
  A unique and patented plastic geocellular storm water management system.

- **ACO ENVIRONMENT**
  Oil water separator and spill containment systems.

- **ACO WILDLIFE**
  Tunnel and fence system designed to guide amphibians and other small creatures safely across roads.

- **ACO SELF**
  Simple plastic and polymer concrete trench units for use around the home, garden and office.
