

www.TreeKeeperBags.com

### What's Included:

- 1 X TreeKeeper Pro stand base (A)
- 3 X Tree trunk bolts (B)
- 1 X Screw down collar (C)
- 1 X Side Castor Wheels\* (D)
- 4 X Locking bottom castors (E)
- 2 X Wrench (1 for the castors, 1 for the side wheels)

**Assembly:** (1) Attach the Side Wheels onto the stand using the 3 provided allen bolts and allen bolt wrench. **IMPORTANT:** to avoid cross-threading the allen bolts, hold the side wheel assembly firmly against the stand and line up the holes. Thread a **BOTTOM** allen bolt in first, be careful to continue to hold the assembly tight until the allen bolt is nearly completely threaded in. Once the allen bolt is secure, repeat the process for the second **BOTTOM** bolt, and then lastly, the **SIDE** allen bolt. If at any time you feel the bolt begin to cross-thread, make sure you are firmly holding the side assembly in place. If not properly held during installation, the side assembly could slide from side to side causing the bolt to cross-thread. If you feel this occur, unscrew the bolt, reposition and firmly hold the side wheel assembly, and try again.

(2) Insert the three tree trunk bolts into the screw on collar. (3) Using the included wrench, fasten on the four castor wheels tightly into each corner of the stand base.

**Attaching your TreeKeeper Bag:** If your TreeKeeper bag is not already attached to the TreeKeeper Pro base, simply attach the bag to each of the four legs of the stand with the Velcro straps. (See your TreeKeeper instruction sheet for more detailed instructions)

*\*Side castors on TreeKeeperPRO models only. (Not available on TK Decorated models).*

**TreeKeeperPro Stand Usage:** Place the tree trunk into the support collar on the stand. Make sure that each collar section is equally tightened around the trunk of the tree. Each bolt and collar section needs to be securely tightened around the base of the tree.

Use the four bottom wheels to easily roll your tree into place. Once your tree is fully compressed and secured in the TreeKeeper storage bag, carefully lean the tree to one side and wheel away using the side castors.

**DO NOT** lean the tree and pull down stairs. The tree can be heavy and fall on you **AND/OR** the bottom castor wheels can be snapped off as tree is dragged from step to step.

**IMPORTANT! Please Read:** Be extremely careful when leaning the tree to the side. As many trees are very heavy, please be cautious to make sure you can safely maneuver and roll the size and weight of your stored tree. Also, be cautious in moving the tree laterally as the tree may tip over. **URGENT:** Do not attempt to lean the tree to one side when not properly stored in a TreeKeeper bag.
