**INSTALLATION INSTRUCTIONS**

**Step 1:**
Orient mounting bracket vertically. Locate and mark two mounting holes at least 4” apart. Place one hole above upper strap slots in bracket and the other hole below lower strap slots.

**Step 2:**
Drill pilot holes approximately 1/16” - 3/32” for included screws. For hollow wall or concrete, install appropriate anchors at locations marked in Step 1 (Figure 1). Install screws or anchors.

**Step 3:**
Slide the straps through side slots in bracket (Figure 2), and pull about half way through.

**Step 4:**
Center expansion tank on bracket aligning notch in bracket with rib on tank (if applicable). Tighten straps around tank with 5/16” socket/nut driver. To avoid damaging tank, do not over-tighten (Figure 3).
