

Making Quality Roofing Felt Since 1984

United Roofing Mfg. PRODUCTS

Use & Care

15 Lb. Felt Quality Roof Deck Protection

Lowe's Item 10306

Storage/Care:

We recommend that the rolls be kept in a dry area out of the weather. If you are applying the felt in cold weather, we recommend storing it in a warm place at least 24 hours before applying to roof.

Application/Use:

Organic felt is an underlayment and moisture barrier between the primary roof (for example asphalt shingles) and the roof decking. It is not intended to be a primary roof. We recommend that the primary roof be installed immediately after the application of the felt.
