Important Safety Information

Improper handling can cause serious damage to the appliance and/or to the user. Please read the following safety information.

⚠️ Electrical Safety

- This unit is designed for indoor use only.
- Do not use the unit in extremely humid or wet environments.
- Do not wet the housing or control panel.
- Do not pull the unit by the cord.
- Always turn the unit off and unplug it from the outlet when cleaning.
- Unplug the unit if it is not going to be used for a long period of time.
- Do not operate the unit with a damaged plug or loose socket.
- Use only the correct power supply with appropriate amperage.
- If the power cord is damaged, it must be replaced by the manufacturer, a service agent, or a qualified technician.
- Do not remove any part of the casing unless you are instructed to do so by an authorized technician.

⚠️ General Safety

- This portable air conditioner is not intended to be used by children.
- Children should be supervised to ensure that they do not play with this product.
- Do not allow children to play with the controls or drop any objects into the air outlets or vents.
- Do not place objects or let any person sit on top of the unit.
- Only use in the upright position on a flat, level surface and provide at least 12 inches of clearance from any walls or objects.
- Route the power cord carefully to avoid a tripping hazard.
Operation of Safety Plug

Note: Electrical products should not be disposed of with household waste. Please contact your local recycling center for more information about how to recycle electronic waste.

Your portable air conditioner is supplied with a Leakage-Current Detection and Interruption (LCDI) safety plug. This device provides protection to reduce the risk of fire due to arcing faults in the power supply cord. Before using your portable air conditioner, follow the instructions below to ensure that the LCDI plug is working properly:

1. Plug the power cord into a grounded outlet.
2. Press the TEST button on the LCDI plug. This should trip the plug and cut the power to the air conditioner. If the plug does not trip and you are able to turn on the unit, please contact EdgeStar support.

DO NOT USE YOUR PORTABLE AIR CONDITIONER IF THE TEST FAILS.
Press the RESET button to start using your air conditioner.

DO NOT use the TEST and RESET buttons as an ON / OFF switch.

Introduction

Thank you for purchasing this EdgeStar portable air conditioner. We hope that this purchase will be the beginning of a lasting and rewarding relationship between you and EdgeStar. We will provide the customer support and exemplary products necessary to nurture that relationship.

This manual contains important information regarding the proper installation, use, and maintenance of your portable air conditioner. Following this manual will ensure that your product will work at its peak performance, efficiency, and safety.

Please save the original product packaging in case you need to safely transport your portable air conditioner.

For Your Records:

Please write down the model number and serial number below for future reference. Both numbers are located on the ratings label on the back of your unit and are needed to obtain warranty service. You may also want to staple your receipt to this manual as it is the proof of your purchase, and is also needed for service under your warranty.

Model Number: ________________________________

Serial Number: ________________________________

Date of Purchase: ________________________________

For a more efficient experience, please do the following before contacting customer service:

• If you received a damaged product, immediately contact the dealer that sold you the product.

• Read and follow this instruction manual carefully to help you install, use, and maintain your portable air conditioner.

• Read the troubleshooting section of this manual as it will help you diagnose and solve common issues.

• Visit us on the web at https://www.edgestar.com for product guides, additional troubleshooting resources, and up-to-date information. You can also find an interactive self-diagnostic tool at https://support.edgestar.com. If you need service, our friendly customer service representatives are available via email at service@edgestar.com or by telephone at 1 (866) 319-5473.

### Suggested Tools

- Philips Screw Driver (Medium Size)
- Tape Measure / Ruler
- Scissors
- Saw (in the event that your window panel needs to be cut down in size for installation).
Preparations for Installing the Window Kit
You must vent your portable air conditioner when running it in Cool or Dry (Dehumidify) mode. Your unit includes a window exhaust kit that can be used to vent the unit out of a window. Before you begin, make sure that you have all the parts necessary for installation and that a suitable location is picked.
If you have multiple windows, choose one that is near an electrical outlet that will be able to provide sufficient power to your unit. See the power requirements listed on the product label printed on the side, or on the back of your portable air conditioner.
Please follow the installation instructions carefully to avoid personal injury or damage.

⚠️ Note:
- You may need to contact your electrician if your room’s circuit is not able to power your unit.
- When positioning the unit, be sure to allow the proper distance between the unit and the wall as shown below.

Window Kit Installation Instructions
The window kit can be installed in either a double-hung sash window or in a sliding sash window. Please refer to the instructions below that pertain to your specific window type.

Installation in a Double-hung Window

1. Attach Grille
   Attach the protective grille (baffle) to the window panel. Push the grille firmly to ensure that its four raised tabs are attached firmly into the window panel.
2. Assemble Window Panel

To assemble the window panel, start by measuring the width of the window opening where the window panel will be installed.

- If the inner width of the window is between 22” and 24” wide:
  - Remove the adjustment panel from the window panel, and cut the window panel to the same width as the window opening. Cut the side farthest from the exhaust opening.

- If the inner width of the window is between 24” and 36” wide:
  - Slide the adjustment panel to fit the window frame width.

- If the inner width of the window is between 36” and 64” wide:
  - Attach the extension panel to the window panel.
  - Slide the adjustment panel to fit the window frame width.

⚠ Note: The window panel cannot be installed in windows less than 22” wide as you will be unable to shut the exhaust cover.
3. Attach Foam Seal to Window Panel
There are two (2) types of foam seal strips included with your window panel kit. Locate the foam seal that has the adhesive backing. This will be used to minimize air leakage on the top and bottom edges of the window panel.
- Verify your window panel has been extended to the correct width.
- Cut the foam seal to the correct length to cover the entire width of the window panel.
- Attach the adhesive backed foam seal strip to both the top and the bottom of the window panel.

![Foam seal (adhesive back)](image)

4. Attach Window Panel to Window Sill
The window panel must now be secured to the window sill with the screws provided.
- If the inner width of the window is between 22" and 24" wide, attach the window panel to the window sill with two (2) wood screws.
- If the inner width of the window is between 24" and 36" wide, attach window panel to window sill with three (3) wood screws.

![Window panel](image)
• If the inner width of the window is between 36” and 64” wide, attach the window panel to the window sill with four (4) wood screws.

5. Close Window Sash
Closed the window sash firmly against the window panel.

6. Attach Window Lock Bracket
• Ensure that the window sash is closed firmly against the Window Panel.
• Place the Window Lock Bracket as shown in the below image.
• Attach the bracket with a screw.

7. Install Sash Seal
• Cut the foam seal to the appropriate length.
• Insert the foam sash seal between the top of the inner window and the outer window to create a proper seal.

Note: The sash seal is thicker than the window panel seal and does not include an adhesive backing.
Installation in a Sliding Window

1. Attach Grille
   Attach the protective grille (baffle) to the window panel. Push on the grille firmly to ensure that its four raised tabs are attached securely into the window panel.

2. Assemble Window Panel
   To assemble the window panel, start by measuring the width of the window opening where the window panel will be installed.
   - If the inner width of the window is between 22” and 24” tall:
     o Remove the adjustment panel from the window panel, and cut the window panel to the same height as the window opening. Cut the side farthest from the exhaust opening.
   - If the inner width of the window is between 24” and 36” tall:
     o Slide the adjustment panel to fit the window frame height.

Note: The window panel cannot be installed in windows less than 22” tall as you will be unable to shut the exhaust cover.
• If the inner width of the window is between 36” and 64” tall:
  o Attach the extension panel to the window panel.
  o Slide the adjustment panel to fit the window frame height.

3. Attach Foam Seal to Window Panel
There are two (2) types of foam seal strips included with your window panel kit. Locate the foam seal that has the adhesive backing. This will be used to minimize air leakage on the top and bottom edges of the window panel.
• Verify that your window panel has been extended to the correct width.
• Cut the foam seal to the correct length to cover the entire width of the window panel.
• Attach the adhesive backed foam seal strip to both the top and the bottom of the window panel.

4. Attach Window Panel to Window Frame
The window panel must now be secured to the window sill with the screws provided.
• If the inner width of the window is between 22” and 24” wide, attach window panel to window sill with two (2) wood screws.
• If the inner width of the window is between 24” and 36” wide, attach the window panel to the window sill with three (3) wood screws.
• If the inner width of the window is between 36” and 64” wide, attach window panel to window sill with four (4) wood screws.

5. Close Window Sash
• Slide the window sash firmly against the window panel.

6. Attach Window Lock Bracket
Ensure that the window sash is closed firmly against the Window Panel.
• Ensure that the window sash is closed firmly against the Window Panel.
• Place the Window Lock Bracket as shown in the below image.
• Attach the bracket with a screw.
7. Install Sash Seal
  • Cut the foam seal to an appropriate length.
  • Insert the foam seal between the top of the inner window and the outer window to create a proper seal.

⚠️ Note: The sash seal is thicker than the window panel seal and does not include an adhesive backing.

Installation of the Exhaust Hose

1. Assemble Window Exhaust Adapter
  • Connect the two pieces of the Window Exhaust Adapter.
  • Press each side together and firmly snap the clasps into the corresponding slots.

2. Attach Exhaust Hose to Window Exhaust Adapter
  • Press the round end of the Window Exhaust Adapter against the end of the Exhaust Hose.
  • Rotate the hose counterclockwise into the round end of the Window Exhaust Adapter until it is firmly attached.
3. Attach “Joint A” Adapter to Exhaust Hose
- Press the round end of Joint A against the open end of the Exhaust Hose.
- Rotate the hose counterclockwise into Joint A.

4. Attach Hose Assembly to Unit
- Align the cutout tabs on the open end of Joint A with the two tabs located on the air exhaust outlet on the back of the unit.
- Press downward until the tabs click securely in place.
- To remove, press each of the locking tabs and lift upward.
Notes About the Exhaust Hose

Your portable air conditioner is designed to exhaust condensed water that is collected from the air. This water, in either gaseous or droplet form, will be expelled out of the exhaust port of the unit. Please take this into account when deciding how to vent it.

1. The exhaust hose supplied with the portable air conditioner can be extended up to approximately 48 inches; however, for maximum efficiency, use the shortest length possible.

2. Try to prevent any kinks or bends in the exhaust hose. Kinks or bends may trap exhaust air which can radiate heat into the room or potentially cause the portable air conditioner to overheat and shut itself off.

3. The exhaust hose supplied with the portable air conditioner has been specifically designed for this air conditioner. Do not lengthen the hose by adding additional hoses or attachments. Do not replace it with any other hose.

WARNING: Longer hoses are not recommended.

Do not lengthen the exhaust hose by adding additional hoses or attachments.

The exhaust hose should be as short as possible for operational efficiency however, it must not be twisted or bent.

Unacceptable

Acceptable

Acceptable
**Draining the Unit**

Moisture that is collected during the Cool and Dry (dehumidify) modes will condense in an internal tank and will then be evaporated and exhausted out of the exhaust hose. In most cases, there will be no need to manually drain your portable air conditioner; however, in humid conditions the internal tank may fill completely which will cause the unit to automatically shut off. When the internal tank is full, an alarm will sound and the LED window will display the error code “H8”. When this occurs, the tank must be drained manually into a drain pan or other suitable drain.

**Installation of the Drain Hose**

**Step 1**
Remove the drain cap from the drainage port. (The drain cap is connected to the unit with a cord to prevent the cap from being misplaced.)

**Step 2**
Attach the drainage pipe clip to the back panel of the air conditioner with the screw provided as indicated in the diagram.
Step 3
Attach one end of the drain hose to the drain port with the pipe hoop provided.

Step 4
Insert the rubber plug into the other end of the drain hose, secure it with the pipe hoop and attach it to the drain pipe clip.

Manual Drainage
When the internal tank is full the LED window will display the error code “H8”. When this occurs, the tank must be drained manually into a drain pan.

To drain the tank manually:
1. Remove the drain pipe from the pipe clip on the back of unit.
2. Route the drain pipe to a drain pan or other suitable drain.
3. Remove the pipe hoop and rubber stopper from the end of the drain pipe.
4. Allow the water to drain fully.
5. Reinstall the rubber stopper and pipe hoop.
6. Reinsert the drain pipe into the pipe clip.

Note: Although not recommended, you may choose to connect a permanent drain hose (not included) to the drain port provided that a suitable drainage option (floor drain or sink, etc.) is available. Please note that this unit has no drain pump; all water will drain with gravity only, i.e., only “downhill.”
Finishing Installation

1. Install the Remote Control Holster into the groove located on the side of the unit as shown below. The Remote Control Holster provides a convenient location to store your remote control.
2. Install the Power Cord Hooks by sliding each hook into the grooves located on the back and left side of the unit until they click into place. The Power Cord Hooks will allow a convenient place to wind the power cord when not in use.
## Operating Instructions

### Control Panel Overview

<table>
<thead>
<tr>
<th>Button</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>On / Off</strong></td>
<td>Press this button once to manually turn the unit on. Press this button once more to turn the unit off.</td>
</tr>
<tr>
<td><strong>Mode Select</strong></td>
<td>Press the MODE button to cycle between modes: COOL → DRY → FAN.</td>
</tr>
<tr>
<td><strong>COOL</strong></td>
<td>Cool indicator is bright. Display will show set temperature (61°F – 86°F).</td>
</tr>
<tr>
<td><strong>DRY</strong></td>
<td>Dehumidify indicator is bright. Display will be blank.</td>
</tr>
<tr>
<td><strong>FAN</strong></td>
<td>Fan indicator is bright. Display will be blank.</td>
</tr>
<tr>
<td><strong>Remember that the exhaust hose and window kit must be installed when the unit is in Cool or Dry Mode.</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Buttons</strong></td>
<td>In COOL mode, press the ▼ or ▲ buttons to decrease or increase the temperature by 1° degree Fahrenheit. Continue to press this button until you reach your desired temperature. Cool Mode has a temperature range from 61°F - 86°F.</td>
</tr>
<tr>
<td><strong>Fan Speed</strong></td>
<td>When the unit is running in Cool or Fan mode, press the arrow buttons to select the fan speed desired. There are 4 fan settings: LOW → MED → TURBO → AUTO.</td>
</tr>
<tr>
<td><strong>Timer Mode</strong></td>
<td>Press the Timer button to enter timer mode. Press the ▼ or ▲ buttons to adjust the timer setting in increments of ½ hour up to 10 hours and then in increments of 1 hour up to 24 hours while using the remote control. The display will remain in timer mode for 5 seconds and then revert back to displaying the temperature. Press the Timer button again to cancel the timer mode.</td>
</tr>
<tr>
<td><strong>Sleep Mode</strong></td>
<td>Press the Sleep Button to enter sleep mode. The Sleep Mode can be activated when in Cool Mode and will not operate when in Fan Mode. When operating in Cool Mode, the Sleep function will slowly raise the Temp Control by 4° Fahrenheit over the initial 2 hour Sleep Mode period. When the Sleep Mode is active, the LCD will continue to display the Sleep Mode status.</td>
</tr>
</tbody>
</table>
Remote Control

The included universal remote control is used to operate all of your portable air conditioner’s functions. Use the remote control to change modes, fan speed, timer, and temperature settings.

⚠️ Note: Be careful not to drop the remote control. Do not place the remote control in a location exposed to direct sunlight.

<table>

<td>Sleep</td>
<td>This button enables the Sleep Mode or turns it off.</td>
</tr>
<tr>
<td>Light</td>
<td>This button turns the unit’s light on or off.</td>
</tr>
</tbody>
</table>

Installing the Batteries

1. Remove the battery cover plate on the rear of the remote control by sliding it out.
2. Remove and properly dispose of old batteries.
3. Insert two(2) new AAA 1.5 batteries.
4. Reinstall the battery cover plate.

⚠️ Caution: Use only AAA batteries. Remove the batteries if the remote control will not be used for one month or longer. Do not attempt to recharge batteries that are not designed to be recharged. All batteries should be replaced at the same time. Do not mix old and new batteries. Do not dispose of batteries in a fire as they may explode.
**Modes and Features**

**Auto**

When selecting Auto Mode, the air conditioner will operate automatically according to the ambient room temperature. The set temperature is not adjustable in AUTO mode. This is the default mode of operation when the unit is powered on.

**Cool**

If the ambient temperature drops below the temperature you selected, the compressor turns off and the unit functions with the fan only. When the temperature rises above the temperature you selected, the compressor turns on again. The Cool Indicator will be lit. You can press the “+” or “-” to increase or decrease the set temperature.

⚠️ **Note**: The exhaust hose must be used in cooling mode in order to cool a room.

⚠️ **Note**: Whether your desired temperature can actually be reached depends on the ambient conditions. The room temperature remaining slightly above the set temperature is normal.

To operate the unit in cooling mode:
1. Make sure the power cord is plugged into a power outlet.
2. Press the ON / OFF button on the remote.
3. Press the Mode button until the Cool Indicator Light on the Control Panel lights up.
4. Select the fan speed by using the Fan button.
5. Set the thermostat by using the “+” and “-” buttons on the remote. The thermostat is adjustable between 61°F and 86°F in one degree increments.

**Dry**

When dry mode (or dehumidify mode) is selected, the air conditioner operates under dry mode at a low fan speed. The Dry Indicator light will be lit. Under dry mode the fan speed can’t be adjusted.

**Fan**

Fan Only mode is used to circulate the air in your room. No temperature setting is needed.

⚠️ **Note**: Fan Only mode does not require that the exhaust hose be attached.

To operate the unit in Fan Only mode:
1. Make sure the power cord is plugged into a power outlet.
2. Press the ON / OFF button on the remote.
3. Press the Mode button until the Fan Indicator light on the control panel lights up.
4. Press the Fan button to adjust the fan speed.

**Timer**

Pressing the Timer will activate the Timer Mode settings. Pressing the “+” or “-” buttons will adjust the timer setting in increments of ½ hour up to 10 hours and then in increments of 1 hour up to 24 hours while using the remote control. The display will remain in timer mode for five (5) seconds and then revert back to displaying the temperature. Press the Timer button again to cancel the timer mode.
Sleep
Pressing the Sleep button on the remote will turn Sleep mode on or off. The Sleep Mode can be activated when in Cool Mode and will not operate when in Fan Mode. When operating in Cool Mode, the Sleep function will slowly raise the Temp Control by 4° Fahrenheit over the initial 2 hour Sleep Mode period. When the Sleep Mode is active, the LCD will continue to display the Sleep Mode status.

X-Fan
The X-Fan mode will operate the indoor fan at low speed to remove any residual moisture through the exhaust hose. The X-Fan mode is available in COOL or DRY modes only. After the unit has been turned off, the X-Fan function may continue to operate for up to 10 minutes in order to dissipate any moisture collected in the unit.

Turbo
The Turbo function sets the unit into an accelerated mode that enables the unit to reach the desired temperature setting in a shorter amount of time. Pressing the Turbo button will activate / deactivate the Turbo function.

Maintenance
Clean the air conditioner and filters regularly to maximize performance and efficiency, and to prolong the unit’s life. Be sure to always unplug the air conditioner from the power outlet before cleaning.

Cleaning the Exterior
Use a soft dry cloth to wipe the body of the air conditioner clean. If necessary, use lukewarm water to dampen a cloth to clean the unit.
Use a soft bristle brush to clean between the vents.

Never use abrasive chemicals, volatile substances, gasoline, detergents, chemically treated cloths, or other cleaning solvents that may damage the cabinet exterior.

⚠️
Warning: Never spray water directly on the unit.
Cleaning the Pre-Filters

Your portable air conditioner ships with pre-filters to help remove dust and other particles from the air. It is necessary to clean the pre-filters periodically. Depending on the environment in which the unit is operating, it may be required to check and clean the filters on a weekly basis.

To clean the pre-filter, follow the steps below:
1. Power off the unit.
2. Locate the filter housing on the rear upper left hand side of the unit, and open the filter housing door.
3. Grasp the pre-filter by the handle / tab and gently slide it outward to remove it. Repeat this process for each pre-filter. Pre-filter 1 is located on the back of the unit, and pre-filter 2 is located on the side.
4. Use a vacuum cleaner or tap the pre-filter lightly to remove loose dust and dirt, then rinse thoroughly under lukewarm running water (below 104°F). You may use a mild soap and water solution if needed.
5. Allow the pre-filter to air dry in a cool and shaded place. Dry the pre-filter thoroughly before reinstalling it.

⚠️ Warning: Never operate the unit without the pre-filters.

Preparation for Storage

If you are not going to be using the unit for an extended period of time, follow the instructions below before storing your unit:
1. Drain all the water from the unit’s reservoir. Operate the unit in fan mode for a few hours to thoroughly dry any moisture left on the coils inside the unit.
2. Power off the unit. Then clean or change the filters.
3. Unplug and carefully wind the power cord.
4. Remove the exhaust hose and duct connectors and keep them in a safe place.
Energy Saving Guide

Read and follow the guide below to get the best performance and efficiency from your portable air conditioner:

- Do not cover the air outlet (exhaust) while the unit is in use.
- Do not place the unit in front of curtains or drapes to ensure they do not obstruct the air intake.
- Minimize the length of the exhaust hose.
- Make sure the exhaust hose is as straight as possible and avoid kinks or bends.
- Keep curtains, blinds, or drapes closed during the sunniest part of the day.
- Minimize the heat sources (direct sunlight, computers, servers, people, etc.) in the room.
- Close all windows and doors.
- Use the unit in a contained room. For example, operate the unit in a room with four walls and a ceiling, instead of a partitioned studio, or warehouse.
- Make sure the unit is on a level surface.
- Minimize the amount of humidity in the room. For example, run the unit as a dehumidifier.
- To prolong the compressor's life, please wait at least three (3) minutes before turning the unit back on after shutting it off.
- Inspect and clean the pre-filters regularly.
- Perform routine maintenance.
# Troubleshooting

Follow the troubleshooting guide below to resolve common issues.

<table>

<td>My air conditioner is not cooling at all.</td>
<td>The unit is not operating in cooling mode.</td>
<td>Set the unit to be in cooling mode, and lower the set temperature (pg. 19).</td>
</tr>
<tr>
<td></td>
<td>The compressor is not on.</td>
<td>The compressor may take up to 3 minutes to turn on, or longer if it is too warm.</td>
</tr>
<tr>
<td></td>
<td>The ambient temperature is too high.</td>
<td>Lower the room temperature to be below 90°F.</td>
</tr>
<tr>
<td></td>
<td>The filter may be dusty or blocked.</td>
<td>Clean the filters (pg. 21).</td>
</tr>
<tr>
<td></td>
<td>The exhaust port is blocked.</td>
<td>Remove any obstructions in the exhaust hose and port.</td>
</tr>
<tr>
<td>My air conditioner blows cold air, but does not lower the room temperature.</td>
<td>The unit has not been vented.</td>
<td>The unit must be vented (pg. 4).</td>
</tr>
<tr>
<td></td>
<td>The area of the room is too large.</td>
<td>Minimize the size of the area to be cooled, i.e. adding a drop ceiling. Use more than one unit to cool the area, or use a larger unit.</td>
</tr>
<tr>
<td></td>
<td>There are open windows and doors.</td>
<td>Close any open doors or windows.</td>
</tr>
<tr>
<td></td>
<td>There are too many heat sources.</td>
<td>Remove or shut off additional heat sources such as radio equipment, servers, etc.</td>
</tr>
<tr>
<td></td>
<td>The room / garage may be inadequately insulated.</td>
<td>Properly insulate the room to be cooled, i.e. using fiberglass.</td>
</tr>
<tr>
<td></td>
<td>The ambient temperature is too high.</td>
<td>The unit may not work if the room temperature is above 90°F.</td>
</tr>
<tr>
<td></td>
<td>Direct sunlight is heating the room.</td>
<td>Close the curtains or pull down the blinds to minimize the amount of direct sunlight entering the room.</td>
</tr>
<tr>
<td></td>
<td>The filter may be dusty or blocked.</td>
<td>Clean the filter and replace it if needed.</td>
</tr>
<tr>
<td></td>
<td>The air intake or exhaust ports are obstructed.</td>
<td>Remove anything blocking the ports.</td>
</tr>
</tbody>
</table>

⚠️ Tip: Run the unit before it is needed. For example, run the unit in the morning before the area gets hot, and continue to run the unit all day long in order to maintain a low temperature.
**Error Codes**

The air conditioner may display an error code if it is not operating correctly. Below are the list of error codes and their description.

New Portable Air Conditioner BTU’s

You may notice that the cooling capacities (in British Thermal Units or BTU’s) labeled on portable air conditioners (PAC’s) are now lower than on models produced prior to October 1, 2017. This is because the labeling on new productions of PAC’s must follow a new federal test standard that was established by the Department of Energy: 10 CFR 430, subpart B, appendix CC.

The SACC rating shown on your new PAC is a result of this new standard. Models manufactured before 2017 were tested under a different standard (ASHRAE) that produced a higher cooling capacity output. While the SACC BTU’s are lower than the previous ASHRAE BTU’s, the construction and cooling capacity of this model(s) remains unchanged. Both the SACC and ASHRAE ratings are included for consumer comparison.

What is SACC?

SACC, or the Seasonally Adjusted Cooling Capacity, is a rating in BTU/hour that represents the weighted average performance of a PAC in a number of test conditions, some of which may be more extreme than the average use case, which is then adjusted to account for the effect of infiltration air and duct heat transfer. The factors included in the SACC calculation are why the ratings appear lower, even though the model(s) has not changed.
**EdgeStar Limited Warranty**

**One (1) Year Parts & Ninety (90) Days Labor**

This product is warranted by EdgeStar to be free from defective workmanship and materials, subject to any conditions set forth as follows:

**WHAT IS COVERED:**

**LABOR:** For a period of NINETY (90) DAYS from the date of original purchase, labor will be performed free of charge at an authorized EdgeStar repair facility. At its option, EdgeStar will repair the product with new or remanufactured parts, or exchange the defective product with a new, refurbished, or remanufactured product. If a product is replaced, it will carry the remaining warranty of the original product. After the ninety (90) day period, EdgeStar will no longer be responsible for labor charges incurred. All defective products and parts covered by this warranty will be repaired or replaced on a mail-in basis to an EdgeStar authorized repair facility.

**PARTS:** For a period of ONE (1) YEAR from the date of original purchase, EdgeStar will supply new, rebuilt, or refurbished parts free of charge. EdgeStar may request a defective part be returned in exchange for the replacement part. All replacement parts or products will be new, remanufactured, or refurbished. All products and parts replaced by EdgeStar under warranty service become the property of EdgeStar.

This warranty applies to the original purchaser only, and only covers defects in workmanship experienced during operation of the product under normal service, maintenance, and usage conditions. This warranty applies to the purchase and use of this product in residential settings within the contiguous United States of America.

**WHAT IS NOT COVERED:**
The following limitations apply to the coverage of this warranty. This warranty does not cover:

- Labor charges for installation, setup or training to use the product.
- Shipping damage, and any damage caused by improper packaging for shipment to an authorized service center, and any damaged caused by improper voltage or any other misuse, including abnormal service, handling, or usage.
- Cosmetic damage such as scratches and dents.
- Normal wear and tear on parts or replacement of parts designed to be replaced, e.g. filters, cartridges, batteries.
- Service trips to deliver, pick-up, or repair, install the product, or to instruct in proper usage of the product.
- Damages or operating problems resulting from misuse, abuse, operation outside environmental specifications, uses contrary to instructions provided in the owner’s manual, accidents, acts of God, vermin, fire, flood, improper installation, unauthorized service, maintenance negligence, unauthorized installation or modification, or rental or commercial use.
- Labor, service transportation, and shipping charges incurred 91 days or more after the date of original purchase.
- The use of EdgeStar products in commercial or rental settings.
- Optional accessories, attachments, and appearance items.
- Products that have been modified to perform outside of specifications without the prior written permission of EdgeStar.
- Products lost in shipment, or theft.
- Products sold AS IS or from an unauthorized reseller.
- Products that have had their serial numbers removed or defaced. Products with serial numbers that have been invalidated.
- Damage to personal property from use of product.
- Replacement of repair of household fuses, circuit breakers, wiring, or plumbing.

**OBTAINING WARRANTY SERVICE:**

If you believe your product is defective, contact EdgeStar Customer Support for troubleshooting assistance and warranty service at [www.edgestar.com](http://www.edgestar.com) or 1-866-319-5473. Before contacting EdgeStar, have your serial number and proof of purchase available. Once an EdgeStar authorized representative has confirmed that your product is defective and eligible for warranty service, the product must be returned to an EdgeStar repair facility. The purchaser is solely responsible for prepaying all shipping related costs to and from the repair facility. EdgeStar is not responsible for damage resulting from shipper mishandling or improper packaging. Do not return a defective product to the place of purchase. Products received without a return authorization number will be refused.

**THIS WARRANTY IS IN LIEU OF ANY OTHER WARRANTY, EXRESSED OR IMPLIED, INCLUDING WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. TO THE EXTENT ANY IMPLIED WARRANTY IS REQUIRED BY LAW, IT IS LIMITED IN DURATION TO THE EXPRESS WARRANTY PERIOD ABOVE. NEITHER THE MANUFACTURER NOR ITS DISTRIBUTORS SHALL BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL, INDIRECT, SPECIAL, OR PUNITIVE DAMAGES OF ANY NATURE, INCLUDING WITHOUT LIMITATION, LOST REVENUES OR PROFITS, OR ANY OTHER DAMAGE WHETHER BASED IN CONTRACT, TORT, OR OTHERWISE. IN NO EVENT AND UNDER NO CIRCUMSTANCE OF ANY TYPE OR KIND SHALL THE SELLER, MANUFACTURER AND/OR DISTRIBUTOR BE LIABLE FOR ANY REASON, UNDER ANY THEORY, FOR MORE THAN THE BASIC COST OF THE PRODUCT TO THE PURCHASER OR END USER. SOME STATES DO NOT ALLOW THE EXCLUSION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE EXCLUSION MAY NOT APPLY TO YOU. THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, YOU MAY HAVE OTHER RIGHTS THAT VARY FROM STATE TO STATE.**
