Important Safety Information

Warning: The water produced by the window AC is not potable or suitable for drinking. Do not drink the water drained from the unit as it contains contaminates and could make you sick.

Improper handling can cause serious damage to the appliance and/or to the user. Please read the following safety information.

Electrical Safety
- Make sure your hands are dry and not wet before operating the unit.
- Make sure the unit is properly grounded.
- Do not wet the front housing or control panel.
- Do not directly spray water on this Air Conditioner.
- Do not pull the unit by the cord.
- Always turn the unit off and unplug it from the socket when cleaning.
- Unplug the unit if it is not going to be used for a long period of time.
- Do not operate the unit with a damaged or loose plug and/or socket.
- Use only the correct power supply with appropriate amperage.
- If the power cord is damaged, it must be replaced by the manufacturer, a service agent, or qualified technician.
- Do not turn the unit off or on by inserting or pulling the power plug.
- Do not modify the power cord length or share the outlet with another appliance.
- Do not use this unit with an extension cord and/or adapter plug.
- Do not use this unit near flammable gases/combustibles or in close proximity to heating appliances.
- During operation do not remove any part of the outside casing.

Electrical Requirements
- A 115 volt (103.5 minimum, 126.5 maximum), 60 Hertz, AC only, 15 Ampere fused electrical supply is required. A time delay fuse or time delay circuit breaker is also required. A separate circuit, serving only this appliance, MUST be provided.

General Safety
- Do not let people or pets sit or set an object directly in front of air flow.
- If a strange sound, smell, or smoke comes from the unit, turn it off and review the troubleshooting page of this manual.
- Stop operation and unplug unit in the event of a severe storm.
- To ensure proper air flow and intake, make sure the air vents are not obstructed.
- See instructions for cleaning air filters and how often cleaning should occur.
- Do not use strong detergents when cleaning.
- Children should be supervised when operating this unit.
- Do not allow children to play with the controls or drop any objects into the air outlets or vents.
- Do not place objects or let any person sit on top of the unit.
- Route the power cord carefully to avoid a tripping hazard.
- This unit is intended for domestic home use only. Do not use the window air conditioner for commercial or industrial use. Any other use may invalidate the warranty.
- Use caution when unpacking and installing the unit as there may be some sharp edges.
Your window air conditioner is supplied with a Leakage-Current Detection and Interruption (LCDI) safety plug. This device provides protection to reduce the risk of fire due to arcing faults in the power supply cord. Before using your window air conditioner, follow the instructions below to ensure that the LCDI plug is working properly:

1. Plug the power cord into a grounded outlet.
2. Press the TEST button on the LCDI plug. This should trip the plug and cut the power to the air conditioner. If the plug does not trip and you are able to turn on the unit, please contact Koldfront support.

**DO NOT USE YOUR WINDOW AIR CONDITIONER IF THE TEST FAILS.**

3. Press the RESET button to start using your air conditioner.

**Notes:**
- Always make sure the “Reset” button is pushed in for proper operation.
- The power supply cord with LCDI plug must be replaced if it fails to reset.
- Do not use the TEST and RESET buttons as an ON/OFF switch.

Introduction

Thank you for purchasing this Koldfront casement window air conditioner. We hope that this purchase will be the beginning of a lasting and rewarding relationship between you and Koldfront. We will provide the customer support and exemplary products necessary to nurture that relationship.

This manual contains important information regarding the proper installation, use and maintenance of your window air conditioner. Following this manual will ensure that your product will work at its peak performance, efficiency, and safety.

Please save the original product packaging in case you need to safely transport your window air conditioner.

For Your Records:

Please write down the model number and serial number below for future reference. Both numbers are located on the ratings label on the back of your unit and are needed to obtain warranty service. You may also want to staple your receipt to this manual as it is the proof of your purchase, and is also needed for service under your warranty.

Model Number: ________________________________

Serial Number: ________________________________

Date of Purchase: ________________________________

For a more efficient experience, please do the following before contacting customer service:

• If you received a damaged product, immediately contact the dealer that sold you the product.

• Read and follow this instruction manual carefully to help you install, use and maintain your window air conditioner.

• Read the troubleshooting section of this manual as it will help you diagnose and solve common issues.

• Visit us on the web at https://www.koldfront.com for product guides, additional troubleshooting resources and up-to-date information. If you need service, our friendly customer service representatives are available via email at service@koldfront.com.

Front View
Preparations for Installation

⚠️ NOTE: You may need to contact your electrician if your room’s circuit is not able to power your unit.

⚠️ NOTE: To avoid risk of injury and/or product/property damage, please take the following precautions:
- Two or more people are needed to properly handle and install.
- Use proper lifting and carrying techniques.
- Before installation, make sure to inspect the window and sill to ensure they are able to handle the weight and size of this unit.
- Wearing protective gloves will help to avoid injury from sharp edges.

Before you begin, make sure you have all the parts necessary for installation.

If you have multiple windows, choose one that is near an electrical outlet that will be able to provide sufficient power to your unit. See the power requirements listed on the product label printed on the side or the back of your window air conditioner.

The following measurements are required to properly install the air conditioner.
- 15-1/2 inches minimum width
- 16-1/4 inches maximum width (for casement windows)
- 21-1/4 inches minimum height (with window panel frame)
- 20-5/16 inches minimum height (without window panel frame)
- 39-7/16 inches maximum height

Tools Needed:
- Flat Screwdriver • Phillips Screwdriver • Tape Measure • Level • Scissors • Pencil • Electric Drill • Fine Tooth Saw

Parts Supplied:
1. Window platform (1)
2. Platform support brace (1)
3. Adjustment bolt (1)
4. Hex flange nut - 1/4" (1)
5. Window sliding track sealing strip (1)
6. Side channel sealing strip (1)
7. Sliding window sash sealing strip
8. Safety bracket (1)
9-11. Screw - #10x2-1/2” flat-head (2), OR Screw - #10x1-3/4” pan-head (2), OR Screw - #10x1” pan-head (2)
12. Screw - #8x3/4” pan head (6)
13. Screw - #8-32x3/4” self-threading (7)
14. Window locking bracket (1)
15. Plastic window panel (1)
16. Side channel (2)
17. Screw - #8x3/8 truss head (6)
18. Window panel frame (1)
Window Installation Instructions

⚠️ NOTE:
- These instructions are for installation in a standard slider or casement window only.
- If installing the unit into a casement window, open the window to the maximum amount to allow for clearance of the cabinet.
- If the window cannot open more than 15 ½” for the cabinet to clear the window, the entire window can be removed. If this is necessary, contact a professional to ensure proper installation.

⚠️ NOTE: When choosing your window, make sure power supply cord is within 6 feet of a grounded 3-prong outlet. Do not use an extension cord.

Preparing the Unit for Installation

Attach the Window Platform to the Window
1. Using the adjustment bolt and the hex flange nut, secure the platform support brace to the window platform. Choose a slot for the adjustment bolt on both the platform and the support brace that will create a 45° angle between the two pieces.
   - Place the window platform assembly in the installation window to determine if the platform sits properly and will provide the proper slope (3/16” (~3°) lower on the outside).
   - If the platform does not provide the proper slope, then move the adjustment bolt to a different slot in the platform and support brace and test again.

![Diagram of window platform with labels A, B, C, D]

A. Window platform  
B. Hex flange nut  
C. Platform support brace  
D. Adjustable bolt

⚠️ Note: If you are planning to use a siding protection board (step 5) on the outside of the house, hold down the window platform flat while testing.

2. Measure 8 11/16” from the window jamb and lightly draw a line in pencil.
3. Center the window platform on the newly drawn line with the inner (second) tab on the bottom of the platform pressed against the inside edge of the window track. Mark two holes on the window track or sill using the two holes on the window platform on either side of the platform tab. Remove the window platform and then drill two 9/64” holes in either the window track or sill in the two marked spots.

4. Apply the adhesive window sliding track sealing strip by first removing the protective backing and then placing it to the room side of the window track. The center of the sealing strip should coincide with the line draw in step 2. The two screw holes drilled in step 3 should be directly above the sealing strip on the inner track.

5. Securely attach a siding-protection board to the side of the house.

⚠️ Note: This step is optional. If you have no intention of using a siding-protection board please proceed with step 6.

6. Place the window platform with the platform tab against the inside of the window track. Fasten the window platform (allowing for some adjustment space) to the window track or sill using the previously drilled holes and the appropriate length screws (items 9 through 11 in Parts Supplied).

7. Confirm that, when secured, the outside edge of the window platform is 3/16” (~3°) lower than the inside. If this is not the case, adjust the window platform until it is in the correct position and then secure it in place by tightening the screws.
8. Use a level to make sure that the platform is level from left to right, but maintains to 3/16” slope from front to back. Adjust the screws and use leveling shims if necessary.

**Attach Window Panel Frame and Side Panels**

1. Measure the height of the window opening from the top of the window platform. Subtract 20 5/8” from this measurement and take note of the length for step 2.

![Measurement Diagram]

2. Cut the plastic window panel along the shorter side, making the longer side match the length measured in step 1 using a fine tooth saw. Remove any burrs with a file.

**Caution:** Take proper precautions when using the fine tooth saw. To avoid injury make sure that the plastic window panel is secure before cutting.

3. Fasten the side channels to the sides of the air conditioner using three #8x3/8 screws (item 17 in the parts supplies list) per channel. When fastening the screws start with the top screw and make sure that the curved ends on the long end of the channel face towards the back of the air conditioner.

![Screws Diagram]

4. Slide the plastic window panel into the window panel frame with the smooth side facing the flat edges of the panel frame. Once the plastic window panel is in place, slide the panel frame assembly down into the side channels until the bottom of the plastic panel rests inside the groove on top of the air conditioner.
5. Cut the side channel sealing strip into two equal lengths. Remove the protective backing and apply it to the back of the side channel starting just below the window panel frame. Remove any excess length so that the seal is even with the bottom of the side channel.

Remove the Front Panel
1. Remove the four (4) screws from the front panel.
2. Press firmly on both sides of the metal case close to the front panel and pull the front panel out and up to release it from the case.
3. Remove the four (4) screws on the front panel holding the control panel.
4. Be mindful of the control panel when moving the air conditioner.

⚠️ NOTE: Be careful not to push or pull the louvers when removing the front panel.
Installing Air Conditioner Into a Slider Window

NOTE: When choosing your window make sure the power supply cord is within 6 feet of a grounded 3-prong outlet.

Follow the steps listed below to install the air conditioner into the window:

1. Using two (2) or more persons, safely lift the air conditioner into the windowsill on top of the previously installed window platform:
   - The air conditioner should sit so that the window panel frame and side channels are against the top and side window jambs.

2. Slide the window firmly against the side of the cabinet, making sure not to peel the sealing strips from the window track and side channels.
   - If the window does not fit snugly against the window panel frame it can be secured with screws.
   - Using the partially plugged holes in the window panel frame, drill 1/8” pilot holes for the screws.
   - Secure the window panel frame to the slider window with #8x3/4” or #8-32x3/4” screws.

3. Install the window Safety Bracket to prevent movement of the air conditioner (in or out):
   - Place the window safety bracket over the base of the air conditioner and the front of the window platform.
   - Secure the window safety bracket to the window platform using a #8-32x3/4” self-threading screw.

A. Window safety bracket
B. Window platform
C. Air conditioner

NOTE: When choosing your window make sure the power supply cord is within 6 feet of a grounded 3-prong outlet.
4. Place the sliding window sash sealing strip between the far vertical edge of the inner window and the glass of the outer window.

5. Install the window locking bracket to lock the inner window to the base of the outer window.
   - Use one #8x3/4" screw or #8-32x3/4" self-threading screw to fasten the window locking bracket in place.

6. Replace the front panel by reversing the steps in the “Remove the Front Panel” section.

**Installing Air Conditioner Into a Casement Window**

⚠️ NOTE: When choosing your window make sure the power supply cord is within 6 feet of a grounded 3-prong outlet.

Follow the steps listed below to install the air conditioner into the window:

1. Using two (2) or more persons, safely lift the air conditioner into the windowsill on top of the previously installed window platform:
   - The air conditioner should sit so that the window panel frame and side channels are against the top and side window jambs. The side channels should overlap the side window jambs equally.
2. Secure the window panel frame to the top window jamb:
   - Drill two 9/64” diameter pilot holes in the top window jamb that are in line with the partially plugged holes in the window panel frame.
   - Secure the window panel frame with two #8-32x3/4” self-threading screws.
   - If additional support is needed, two screws may be used on the sides of the panel frame as well.

3. Secure the side panels to the side window jambs:
   - Drill two screw holes in the side channels near the bottom of the channels.
   - Drill two 9/64” diameter pilot holes in the side window jambs.
   - Secure the side channels using two #8-32x3/4” self-threading screws.

   **NOTE:** Be careful not to twist the side channels seals when fastening the screws.

4. Replace the front panel by reversing the steps in the “Remove the Front Panel” section.

---

**Control Panel Operations**

**Digital Display**

**Using the Control Panel**

**To Turn the Unit On:**
Press the On/Off button.

**NOTE:** The Energy Saver feature will automatically turn on in “Cool,” “Dry,” and “Auto” modes.

**To Change Temperature:**
Press or hold either the Left (Increase) or Right (Decrease) button until desired temperature is seen on the digital display. This temperature will be automatically maintained anywhere between 61°F (16°C) and 86°F (30°C).
To Adjust Fan Speeds:
To select the speed of the fan, press the Fan Speed button which cycles through four (4) steps: Auto, Low, Medium, and High. Each time the button is pressed the fan speed mode is shifted to the next speed option.

⚠️ NOTE: While in “Dry” mode, the fan speed is automatically set to Low and cannot be adjusted.

To Select Operating Mode:
To choose the operating mode, press the Mode button. Each time you press the button, a mode is selected in a sequence that cycles from Auto -> Cool -> Energy Saver -> Fan Only -> Dry. The indicator light beside the mode button will be illuminated and remain on once the mode is selected.

To Operate in Auto Mode:
- When you set the unit to “Auto” mode the unit will automatically select cooling or fan only operation: Whichever will reach and maintain the default cooling temperature settings.
- When the ambient room temperature is greater than 78°F, the unit will select cooling mode. When the ambient room temperature is less than 73°F, the unit will select fan only mode. This process will continue to keep the ambient temperature in the range of 78°F to 73°F.
- In auto mode, the set temperature cannot be adjusted. The display will show 77°F when running in cool mode or 68°F when running in fan only mode.

⚠️ Note:
- The unit does not constantly take temperature readings. The unit will take a temperature reading periodically while operating in AUTO mode, or immediately upon adjustment of the desired set temperature.
- When operating in AUTO MODE the unit may not switch between Cooling and Fan Mode at the exact moment when a temperature change has occurred.
- Room temperature may be different than the temperature sensed in front of the air conditioner.

To Operate in Cool Mode:
- When the unit is set to “Cool” mode it will cool the room to maintain the desired set temperature.
- When the desired temperature has been reached, the unit will automatically maintain the temperature.
- Press the Right and Left buttons to adjust the desired temperature and press the Fan Speed button to adjust the fan speed.

To Operate in Energy Saver Mode:
- In this mode, the air conditioner will attempt to save energy by cooling less frequently while still trying to maintain the desired set temperature.
- The Fan Speed can still be adjusted.
To Operate in Fan Only Mode:
- Use this mode when cooling is not desired, such as for room air circulation or to exhaust air (remember to open the vent). You may choose any fan speed you prefer.

To Operate in Dry Mode:
- In this mode, the air conditioner will operate as a dehumidifier. Because the conditioned space is closed or sealed, some degree of cooling will continue to occur.
- The air conditioner runs at the Low fan speed, which cannot be adjusted.

To Use Timer (Auto Start/Stop) Feature:
- To initiate the Auto Start program, press the Timer button when the unit is off.
- To initiate the Auto Stop program, press the Timer button when the unit is on.
- Press or hold the Left (Decrease) or Right (Increase) button to change the Auto Time by ½ hour increments up to 10 hours, and then one (1) hour increments up to 24 hours.
- The selected time will register for five (5) seconds and the system will automatically revert back to display the previous temperature setting or room temperature when the unit is on.

⚠️ Note: When the unit is powered off, there is no display.

Filter Check Feature:
This feature is a reminder to clean the Air Filter for more efficient operation. The LED light will illuminate after 250 hours of operation. To reset after cleaning the filter, press the Filter Check button and the indicator light will turn off.

Digital Display:
- Displays the set temperature in degrees Celsius or Fahrenheit while in most modes.
- For directions to change the display from “F” to “C” please see the Additional Remote Functions section.

Air Directional Louvers:

The 4-way air directional louvers allow you to direct the air flow Up, Down, Left, and Right throughout the room as needed. To adjust the air directional louvers side to side use the center handles as you move side to side.
Remote Operations

The included remote is a universal remote control. Some functions may be found on the remote that this model of air conditioner does not have. If an unavailable function is selected the unit will continue operating under its current running status. Use the remote control to change modes, fan speed, timer, and temperature settings as well as to set sleep mode.

**Note:** Be careful not to drop the remote control. Do not place the remote control in a location exposed to direct sunlight.

</tbody>
</table>
Installing the Batteries

1. Remove the cover on the back of the remote control.
2. Insert the batteries with the (+) and (-) ends pointing in the direction indicated.
3. Install the cover on the back of the remote control.

⚠️ Caution: Use only AAA batteries. Remove the batteries if the remote control will not be used for one month or longer. Do not attempt to recharge batteries that are not designed to be recharged. All batteries should be replaced at the same time. Do not mix old and new batteries. Do not dispose of batteries in a fire as they may explode.

Additional Remote Functions

Child Lock:
- Press the Increase and Decrease buttons simultaneously to turn the child lock function on or off.
- While the child lock function is active, the LOCK indicator on will show on the remote display.
- While the child lock function is active, the remote will not send signal.

Temperature Display Change:
- While the unit is off, press the Decrease and Mode buttons simultaneously to switch the temperature display between Celsius and Fahrenheit

Light Function:
- While the unit is either off or on, you may hold the “+” and “Fan” buttons simultaneously for three (3) seconds to turn the LED display on or off.

⚠️ Note:
- In order for the remote to function properly, the distance between the remote and the air conditioner should not exceed 26ft (8m).
- Electronics may interfere with the signal from the remote. This can be resolved by moving closer to the air conditioner when using the remote.
- The remote should have a unobstructed path to the air conditioner.
Maintenance

Clean the air conditioner and filters regularly to maximize performance and efficiency, and prolong the unit’s life. Be sure to always unplug the air conditioner from the power outlet before cleaning.

Air Filter Cleaning

The air filter should be checked at least once a month to see if cleaning is necessary. Trapped particles in the filter can build up and potentially cause an accumulation of frost on the cooling coils.

1. Push the vent handle to the “vent closed” position.
2. Grasp the filter, pull up and out.
3. Wash the filter using liquid dishwashing detergent and warm water. Rinse the filter thoroughly.
4. Gently shake excess water from the filter. Be sure the filter is thoroughly dry before replacing it.
5. You also have the option of cleaning the filter with a vacuum.

⚠️ Warning: Never use hot water over 113°F (45°F) to clean the air filter. Never attempt to operate the unit without the air filter.

⚠️ NOTE: Winter Storage- If you plan to store the air conditioner during the winter, remove it carefully from the window according to the installation instructions. Make sure to clean the unit thoroughly and cover it with plastic or return it to the original carton.
Cabinet Cleaning

- Be sure to unplug the air conditioner to prevent shock or fire hazard. The cabinet and front may be dusted with an oil-free cloth or washed with a cloth dampened in a solution of warm water and mild dishwashing detergent. Rinse thoroughly and wipe dry.
- Never use harsh cleaners, wax, or polish on the cabinet front.
- Be sure to wring excess water from the cloth before wiping around the controls. Excess water in or around the controls may cause damage to the air conditioner.

Normal Sounds

- **High Pitched Chatter**-High efficiency compressors may have a high pitched chatter during the cooling cycle.
- **Sound of Rushing Air**-At the front of the unit, you may hear the sound of rushing air being moved by the fan.
- **Gurgle/Hiss**-Gurgling or Hissing noise may be heard due to refrigerant passing through the evaporator during normal operation.
- **Vibration**-The unit may vibrate and make noise because of poor wall or window construction or incorrect installation.
- **Ping or Switching**-Droplets of water hitting the condenser during normal operation may cause these sounds.

Error Codes

If any of the codes found below should appear on the display of the air conditioner please turn the unit off and back on to see if the code clears. If the error code continues to display please visit [koldfront.com](http://koldfront.com) for service.

- **F1** - Indoor ambient temperature sensor error
- **F2** - Indoor internal temperature sensor error
- **F4** - Outdoor internal temperature sensor error
- **FJ** - Air outlet temperature sensor error
- **EP** - Miscellaneous indoor temperature sensor error
- **FO** - Refrigerant shortage in the sealed system
- **H3** - System overload protection
Energy Saving Guide

Read and follow the guide below to get the best performance and efficiency from your window air conditioner:

- Do not cover the air outlet (exhaust) while in use.
- Use the timer to operate the unit before it is needed. For example, set the timer to turn on the unit in cooling mode for three (3) or more hours to cool the room before you arrive. You may want to operate the unit all day if you live in a warmer climate.
- Minimize the heat sources (direct sunlight, computers, servers, people, etc.) in the room.
- Close all windows and doors.
- Use the unit in a contained room. For example, a room with four walls and a ceiling, instead of a partitioned studio, or warehouse.
- Make sure the unit is secure with no gaps where air can escape.
- Minimize the amount of humidity in the room. For example, run the unit as a dehumidifier.
- To prolong the compressor’s life, please wait at least 3 minutes before turning the unit back on after shutting it off.
- Inspect and keep the air filters clean by cleaning regularly.
- Perform routine maintenance.
# Troubleshooting

Follow the troubleshooting guide below to resolve common issues.

<table>
<thead>
<tr>

Edgestar Limited Warranty

Full Two-Year Parts and Labor

This product is warranted by EdgeStar and is subject to any conditions set forth as follows:

WHAT IS COVERED:
For a period of TWO (2) YEARS from the date of original retail purchase, EdgeStar will repair or replace any part free of charge, including labor, that fails due to a defect in materials or workmanship. Labor will be performed free of charge at an authorized EdgeStar repair facility and EdgeStar will supply new, rebuilt, or refurbished parts free of charge. EdgeStar may request a defective part be returned in exchange for the replacement part. All replacement parts or products will be new, remanufactured, or refurbished. All products and parts replaced by EdgeStar under warranty service become the property of EdgeStar. After the 24 month period, EdgeStar will no longer be responsible for labor charges incurred or replacement parts. All defective products and parts covered by this warranty will be repaired or replaced on a mail-in basis to an EdgeStar authorized repair facility. This warranty applies to the original purchaser only, and only covers defects in workmanship experienced during operation of the product under normal service, maintenance, and usage conditions. This warranty applies to the purchase and use of this product in residential settings within the contiguous United States of America.

Exceptions: Commercial or Rental Use Warranty
90 days labor and parts from date of original purchase. No other warranty applies.

WHAT IS NOT COVERED - The following limitations apply to the coverage of this warranty. This warranty does not cover:
-Labor charges for installation, setup, or training to use the product.
-Shipping damage, and any damage caused by improper packaging for shipment to an authorized service center, and any damaged caused by improper voltage or any other misuse, including abnormal service, handling, or usage.
-Cosmetic damage such as scratches and dents.
-Normal wear and tear on parts or replacement of parts designed to be replaced, e.g. filters, cartridges, batteries.
-Service trips to deliver, pick-up, or repair; install the product; or to instruct in proper usage of the product.
-Damages or operating problems resulting from misuse, abuse, operation outside environmental specifications, uses contrary to instructions provided in the owner’s manual, accidents, acts of God, vermin, fire, flood, improper installation, unauthorized service, maintenance negligence, unauthorized installation or modification, or commercial use.
-Labor, service, transportation, and shipping charges for the removal and replacement of defective parts, beyond the initial 24 month period.
-Products that have been modified to perform outside of specifications without the prior written permission of EdgeStar.
-Products lost in shipment, or theft.
-Products sold AS IS or from an unauthorized reseller.
-Products with serial numbers that have been removed, defaced, or invalidated.
-Damage from other than normal use.
-Replacement or repair of household fuses, circuit breakers, wiring, or plumbing.
-Damage to personal property from use of product.
-Damage from service other than from an authorized EdgeStar repair facility.
-Hoses, knobs, lint trays and all attachments, accessories, and disposable parts.
-Any service charges not specifically identified as normal such as normal service area or hours.
-Any special or consequential damages arising out of the use of the product.

OBTAINING WARRANTY SERVICE: If you believe your product is defective, contact EdgeStar Customer Support for troubleshooting assistance and warranty service at www.edgestar.com or call 1-866-319-5473. Before contacting Customer Support you are required to have your model number, serial number, and proof of purchase available upon request. Once an EdgeStar authorized representative has confirmed that your product is defective and eligible for warranty service, the product must be returned to an EdgeStar authorized repair facility. EdgeStar is not responsible for damage resulting from shipper mishandling or improper packaging. Do not return a defective product to the place of purchase. Products received without a return authorization number will be refused.

THIS WARRANTY IS IN LIEU OF ANY OTHER WARRANTY, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. TO THE EXTENT ANY IMPLIED WARRANTY IS REQUIRED BY LAW, IT IS LIMITED IN DURATION TO THE EXPRESS WARRANTY PERIOD ABOVE. NEITHER THE MANUFACTURER NOR ITS DISTRIBUTORS SHALL BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL, INDIRECT, SPECIAL, OR PUNITIVE DAMAGES OF ANY NATURE, INCLUDING WITHOUT LIMITATION, LOST REVENUES OR PROFITS, OR ANY OTHER DAMAGE WHETHER BASED IN CONTRACT, TORT, OR OTHERWISE. IN NO EVENT AND UNDER NO CIRCUMSTANCE OF ANY TYPE OR KIND SHALL THE SELLER, MANUFACTURER, AND/OR DISTRIBUTOR BE LIABLE FOR ANY REASON, UNDER ANY THEORY, FOR MORE THAN THE BASIC COST OF THE PRODUCT TO THE PURCHASER OR END USER. SOME STATES DO NOT ALLOW THE EXCLUSION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE EXCLUSION MAY NOT APPLY TO YOU. THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS. YOU MAY HAVE OTHER RIGHTS THAT VARY FROM STATE TO STATE.
