Features
1. On/off switch
2. Lock-off button
3. Shavings discharge outlet
4. Planing depth adjustment knob
5. Planing depth graduation

Switching off
- Release the on/off switch. Wait for the blades to stop before setting down.

Planing
- Hold the tool with the nose piece of the shoe resting on top of the workpiece surface.
- Switch the tool on.
- Move the tool steadily forward to perform the cutting stroke.
- Switch the tool off after the stroke has been completed.

Raboteting (fig. F)
- Fit and adjust the parallel fence.
- Proceed as for planing.

Chamfering edges
- The V-groove in the nose piece of the shoe enables you to chamfer edges at 45 angles.
- Hold the tool at an angle with the groove around the edge of the workpiece and perform the cutting stroke.

Emptying the shavings collection bag
- It is a good idea to try a piece of scrap wood before doing finish work.

Assembly
⚠️ Warning: Make sure that the tool is switched off and unplugged when performing the following Assembly steps.

Replacing the cutting blades (fig. A)
The cutting blades provided with this tool are reversible. An extra set of blades is included.

Removing
- Loosen the screws (20) and remove the cover (21).

Fitting
- Slide the blade into the holder until it is against the end stop.
- Tighten the screws using the wrench supplied.

Adjusting the depth of cut (fig. B)
The depth of cut is indicated by the marking (8). The setting range can be read from the graduation (5).

Turning the planing depth adjustment knob (4) to the required depth of cut.
- To prevent damage to the blade, turn the knob to the "9" (park) position whenever the tool is not in use.

Fitting and removing the parallel fence (fig. C)
The parallel fence is used for optimum control on narrow workpieces.
- Loosen the locking knob (9).
- Insert the parallel fence into the desired position.
- Tighten the locking knob.

Connecting a vacuum cleaner to the tool (fig. D)
- Connect the vacuum cleaner hose (13) (not included) to the tool.

Moving the tool along the grain of the wood.
- Unzip the bag and empty it before continuing.

Switching on (Always pick up your planer before depressing the switch.)
- The planer is started by depressing the lock-off button (2) and then depressing the on/off switch (1) on the handle.

Tips for optimum use
- Move the tool along the grain of the wood.
- If the grain is cross or curly, or if the workpiece material is a hard type of wood, adjust the depth of cut to take only a very thin shaving at each pass and take several passes to achieve the desired result.
- To keep the tool in a straight line, press down the front of the tool at the start, and press down the back of the tool at the end of the cutting stroke.

Replacing the drive belt (fig. G)
- Loosen the screws (20) and remove the cover (21).
- Replace the old drive belt.
- Place the new belt (22) over the pulleys. Place the belt over the large pulley (23) first, then over the small pulley (24) manually rotating the belt steadily.

Put the cover back in place and tighten the screws.

Maintenance
- Your tool has been designed to operate over a long period of time with a minimum of maintenance. Continuous satisfactory operation depends upon proper tool care, including the following:
  - Regularly clean the ventilation slots in your tool using a soft brush or dry cloth.
  - Regularly clean the motor housing using a damp cloth.
  - Do not use any abrasive or solvent-based cleaner. Never let any liquid get inside the tool and never immerse any part of the tool into liquid.

IMPORTANT: To assure product SAFETY and RELIABILITY, repairs, maintenance and adjustment (other than those listed in this manual) should be performed by authorized service centers or other qualified service personnel, always using identical replacement parts.
