## Assembly

**⚠ Warning:** Make sure that the tool is switched off and unplugged when performing the following **Assembly** steps.

### Replacing the cutting blades (fig. A)

The cutting blades provided with this tool are reversible. An extra set of blades is included. Replacement cutting blades can be obtained from your local retailer.

#### Removing

- Loosen the bolts (6) using the wrench supplied.
- Slide the blade (7) out of the holder.
- Reverse the blade so that the unused side comes in position. If both sides are worn, the blade must be replaced.

#### Fitting

- Slide the blade into the holder until it is against the end stop.
- Tighten the bolts using the wrench supplied.
- Always replace both cutters.

### Adjusting the depth of cut (fig. B)

The depth of cut is indicated by the marking (8). The setting range can be read from the graduation (5).

- Turn the planing depth adjustment knob (4) to the required depth of cut.
- To prevent damage to the blade, turn the knob to the 'P' (park) position whenever the tool is not in use.

**NOTE:** 10 positive stops indicate  $1/32"$  increase in cut for accurate measurement. The maximum depth of cut is  $5/64"$ . It is recommended that test cuts be made in scrap wood after each readjustment to make sure that the desired amount of wood is being removed by the planer. Several shallow passes will produce a smoother finish than one deep one.

### Fitting and removing the parallel fence (fig. C)

The parallel fence is used to for optimum control on narrow workpieces.

- Loosen the locking knob (9).
- Insert the parallel fence (11) through the opening (10).
- Slide the parallel fence into the desired position.
- Tighten the locking knob.
- To remove the parallel fence proceed in reverse order.

### Connecting a vacuum cleaner to the tool (fig. D)

- Slide the adaptor (12) over the shavings discharge outlet (3).
- Connect a vacuum cleaner hose (13) (not included) to the adaptor.

### Assembling and fitting the shavings collection bag (fig. E)

The shavings collection bag is particularly useful when working in confined spaces.

Before first use, you will have to assemble the shavings collection bag.

- Fit the wire frames (14) to the connecting plate (15) using the screws (16) and washers (17).
- Pull the cloth bag (18) over the frame structure as shown.
- Take care that the bag opening (19) is well fitted around the edge of the connecting plate (15).
- Slide the connecting plate over the shavings discharge outlet (3).

### Operation

- Adjust the depth of cut.
- If necessary, fit and adjust the parallel fence.
- Use sharp cutters only.

### Switching on and off

#### Switching on (Always pick up your planer before depressing the switch.)

- The planer is started by depressing the lock-off button (2) and then depressing the on/off switch (1) on the handle.

### Switching off

- Release the on/off switch. Wait for the blades to stop before setting down.

### Planing

- Hold the tool with the nose piece of the shoe resting on top of the workpiece surface.
- Switch the tool on.
- Move the tool steadily forward to perform the cutting stroke.
- Switch the tool off after the stroke has been completed.

### Rabbeting (fig. F)

- Fit and adjust the parallel fence.
- Proceed as for planing.

### Chamfering edges

The V-groove in the nose piece of the shoe enables you to chamfer edges at 45 angles.

- Hold the tool at an angle with the groove around the edge of the workpiece and perform the cutting stroke.
- It is a good idea to try a piece of scrap wood before doing finish work.

### Emptying the shavings collection bag

The shavings collection bag should be emptied regularly while using it.

- Unzip the bag and empty it before continuing.

### Hints for optimum use

- Move the tool along the grain of the wood.
- If the grain is cross or curly, or if the workpiece material is a hard type of wood, adjust the depth of cut to take only a very thin shaving at each pass and take several passes to achieve the desired result.
- To keep the tool in a straight line, press down the front of the tool at the start, and press down the back of the tool at the end of the cutting stroke.

### Replacing the drive belt (fig. G)

- Loosen the screws (20) and remove the cover (21).
- Remove the old drive belt.
- Place the new belt (22) over the pulleys. Place the belt over the large pulley (23) first, then over the small pulley (24), while manually rotating the belt steadily.
- Put the cover back in place and tighten the screws.

### Maintenance

Your tool has been designed to operate over a long period of time with a minimum of maintenance. Continuous satisfactory operation depends upon proper tool care, including the following:

- Regularly clean the ventilation slots in your tool using a soft brush or dry cloth.
- Regularly clean the motor housing using a damp cloth.
- Do not use any abrasive or solvent-based cleaner. Never let any liquid get inside the tool and never immerse any part of the tool into liquid.
