kWh/year (kilowatt-hours per year) is a measure of energy (electricity) use. Your utility company uses it to compute your bill. Only standard size dishwashers are used in this scale.

**Dishwashers using more energy cost more to operate. This
model's estimated yearly operating cost is:**

\$33 When used with an electric water heater

\$27 When used with a natural gas water heater

Based on four washloads a week and a 2004 U.S. Government national average cost of 8.60¢ per kWh for electricity and 91.0¢ per therm for natural gas. Your actual operating cost will vary depending on your local utility rates and your use of the product.
