

Plant Care Tips

White Wave

Philodendron 'Birkin'

Sunlight

Philodendron Birkin grows best in medium to bright indirect light. It can tolerate lower light conditions, but its growth will be much slower and smaller.

Water

We recommend watering when the first two inches of soil feels dry.

Climate

Philodendrons prefer temperatures of 65 - 85°F.

Soil

Apply a balanced houseplant fertilizer at half strength once every 1 - 3 months.

Plant Story

White Wave

Philodendron 'Birkin'

Birkins are identified by their round, deep green leaves with mildly pointed tips and vivid white pinstripes and variegation. No two leaves are the same.

Philodendron Birkin is a spectacular cultivar of Philodendron Congo Rojo, native to the tropical parts of South America. This hybrid features long, oval shaped leaves with beautiful white pinstripes that grow from its center instead of a vine like most Philos. This unique cultivar was caused by mutation, so Birkins may revert back to their parent plants or continue to mutate, sprouting combinations of deep red and pinstriped foliage.

To prevent the plant from leaning, we recommend rotating the plant weekly to ensure it receives even sun exposure. philodendron Birkin can be displayed anywhere there's bright, indirect light to keep its vibrant colors and should be watered when the top two inches of soil feels dry to imitate its tropical origins. The unique patterning on this plant along with its easy maintenance has made it a popular choice amongst decorative plants and dotting plant parents.
