Please see the instruction manual for further detailed information.
This guide neither supplements nor replaces the instruction manual.

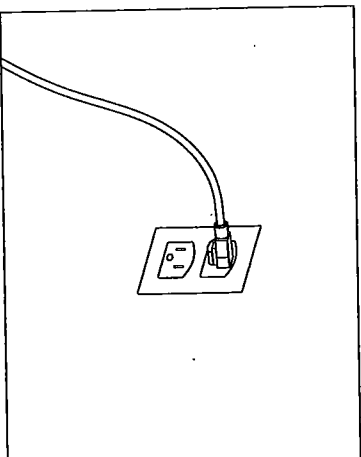

1. **Attach garden hose directly to pump, OR attach the 1 1/4 in. adapter (included with pump) to pump, and then attach Hose Kit (Item #0313726) to the adapter.**
 - Minimum 5/8 in. diameter hose
 - Maximum length 50 ft. (shorter is better)
 - Make sure there are no kinks in the hose
 - Slope hose away from pump to prevent backflow

2. **Place pump in water.**

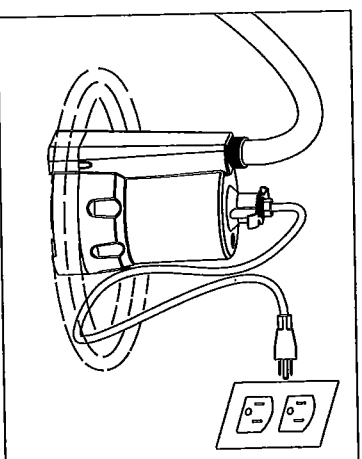

Must be minimum of 1 in. of water for pump to work.
Pump can be totally covered with water.
Place upright on a flat surface.

3. **Plug pump into 3-prong GFCI outlet.**

⚠ WARNING: Do not let plug fall in water

⚠ WARNING: Do not stand in water while plugged in

4. **Allow pump to run; monitor its progress.**

UNPLUG when pump has removed water down to approximately 1/4 in. (**DO NOT** allow to run dry).
Remove pump and hose from location, as hose still has water that can drain back through the pump.
Remove remaining water manually.
