Essential accessories list

WARNING: Choking hazard. Keep all small parts and plastic bags out of the reach of children.

Prepare the wall for installation.

(Note: The depth provided is for reference only. Please determine the installation depth based on the actual thickness of tiles.)

Tips :Embedded box can be cut to flush with tiles before trim installation
(Distance from back of valve body to finish surface to be between 2.6-3.4 inches)

Step 1: Install the Embedded box

Tips: Don't remove the transparent protective cover when installing

• Mark position

• Drill hole

• Insert nylon plug

• Fix the embedded box

Step 2: Connect the water pipes with embedded box

Tips: Clean the water pipe to avoid any blockage, 1/2 inch male NPT fitting connection to be made with pipe thread sealant, do not over tighten.

Step 3: Remove the protective cover

Step 4: Install the handle to test the water

Tips: Test the outlet of Rain shower head and handheld shower head.

Step 5: Remove the handle, Install the transparent protective cover and finish the wall decoration

Tips: Install the transparent cover before finishing the wall so as to protect the embedded box

Step 6: Remove the transparent protective cover

- Cut away the part of the embedded box sticking out so that it is level with the wall.

Step 7: Put the embedded box cover on and fix the handle

Step 8: Install the elbow with hook

• Loose the screw

• Take out the brass fitting

• See next page for step 8 continuously

Step 9: Connect the shower hose and handheld shower head

Tips: Please check whether the washer is inside the shower hose or not. If yes, connect directly; if no, take it from the accessories bag and put it in before connection to avoid leak.

Step 10: Install shower arm and rain shower head

• Loose screw

• Take out the brass fitting

• Fix the brass fitting

• Put the cover on

• Insert the shower arm

• Fix the shower arm

• Install the rain shower head

Clean and maintain product

1. How to clean the shower head :

A. Rub the nozzles with fingers or toothbrush to loosen deposits, then run hot water for a while .

B. Put the shower head in a pot, fill with enough white vinegar or Detergent to cover the shower head. Then soak it for 30 minutes or longer.

C. Use a high quality microfiber cloth and gently wipe over the surface, then rinse with warm water. Finally, use a dry chamois or paper towel to gently remove any residue.

Warm Tips :

If you feel the flow is too small , you can take out the water restrictor accordingly.
