INSTRUCTIONS FOR

PRE-SEEDED HYBRID TURF PATCH

DURAGRASS

When to plant:

For best results use anytime temperatures in your area are consistently above 50°F. Fall planting should be completed six to eight weeks prior to temperatures dropping below 40°F.

Keys to success:

- Loosen top 2" of soil where installing DuraGrass then level ground
 - Water the prepared area well the night before installation
- Water frequently in small amounts (2-3 times/day until grass is 3" tall)
 - ✓ Start mowing when grass is 3" tall

Visit Dura-Grass.com/ps-install to see the easy planting video

PREPARE:

Clear old grass. Loosen the top 2" of soil. Level.

As with planting any type of seed, good preparation of the area is essential. Don't lay DuraGrass Pre-Seeded hybrid lawn patch and seed blanket over any existing grass or vegetation. The seed blanket portion must touch the soil it is to grow in, so clear all grass and vegetation, loosen the top two inches of soil with a rake, and create a smooth surface free of any debris.

Water the area to be laid well the night before laying, this will help the seed blanket tack to the surface, then water, until saturated, three (3) times a day.

PLANT:

Lay DuraGrass Pre-Seeded hybrid lawn patch. Affix with anchors. Water immediately.

Place DuraGrass Pre-Seeded hybrid lawn patch on prepared area. Cut to shape as needed. Water immediately to help the seed blanket portion "stick" to the soil. Align adjacent sections closely together without gaps. Anchor to the ground with provided biodegradable anchors. Water remainder of installed DuraGrass Pre-Seeded hybrid lawn patch until saturated.

WATER:

Frequently (2 or 3 times a day). Until saturated each time.

Proper watering is the key to grow grass through DuraGrass. Water your prepared area well the night before planting. Once planted, water frequently with sprinkler or gentle shower hose nozzle. The seed blanket portion of DuraGrass Pre-Seeded hybrid lawn patch locks in moisture, so watering frequently in small amounts is best. Ideally water 2 or 3 times a day until saturated each time, keeping the seed blanket constantly wet for the first three weeks, or until new grass reaches 3" tall. Begin mowing grass once it gets 3" tall. You can mow directly over DuraGrass.

CUT & SHAPE:

DuraGrass can be cut with scissors to fit your problem areas.

Made in U.S.A. Seed blanket is powered by GroTrax DuraGrass''' is a patent-pending innovation from GrassWorx, LLC

> ay from small children. pply near water, storm drains, age ditches.

CAUTION:
