Unit: mm/inch

◆ **Embedding depth of the Rough-in Valve**

Notice: 1. The installation depth of the rough-in valve (including the tile thickness) must be 2 3/4" (70 mm). Otherwise, the deck plate cannot be installed.

◆ Installation of the Rough-in Valve(concrete wall)

- Step 1: Measure and mark the installation points based on the dimensions of the rough-in valve. Drill holes into the concrete wall at the marked locations and insert the wall anchors.
- Step 2: Secure the rough-in valve to the wall using screws inserted into the wall anchors. Connect the hot and cold water inlet pipes to their respective inlets.
- Step 3: Perform a pressure test to check for leaks at all connections. Ensure there are no leaks before proceeding to the next step.
- Step 4: Once the pressure test is complete and all connections are confirmed to be secure, seal the rough-in valve with concrete.

◆ Installation of the Rough-in Valve(wood wall)

- 1:Secure the rough-in valve directly to the wooden structure using screws.

◆ Installation of the Bathtub Faucet

1. Screw the handle flange onto the valve cartridge of the rough-in valve until it is securely and evenly positioned.
 2. Install the handle onto the valve cartridge (with the screw hole facing downward) and tighten the set screw underneath.
 3. Apply plumber's tape to the threads of the water outlet connector. Carefully screw the connector into the central outlet on the rough-in valve and ensure it is firmly secured.
 4. Align the set screw hole on the spout flange with the set screw hole on the spout, then tighten the set screw. Install the assembled spout onto the water outlet connector and tighten the set screw underneath. Turn on the water and check the connection for any leaks.

◆ Diagrama de la altura de instalación del caño

Unidad: mm/pulgada

◆ Profundidad de empotramiento de la válvula de instalación

Aviso: 1. La profundidad de instalación de la válvula empotrada (incluido el espesor del azulejo) debe ser de 2 3/4" (70 mm). De lo contrario, no se podrá instalar la placa embellecedora.

◆ Instalación de la válvula de empotramiento (pared de concreto)

- Paso 1: Mida y marque los puntos de instalación según las dimensiones de la válvula de preinstalación. Perfore agujeros en la pared de concreto en las ubicaciones marcadas e inserte los anclajes de pared.
- Paso 2: Fije la válvula de preinstalación a la pared utilizando tornillos insertados en los anclajes de pared. Conecte las tuberías de entrada de agua caliente y fría a sus respectivas entradas.
- Paso 3: Realice una prueba de presión para verificar si hay fugas en todas las conexiones. Asegúrese de que no haya fugas antes de proceder al siguiente paso.
- Paso 4: Una vez completada la prueba de presión y confirmadas todas las conexiones como seguras, selle la válvula de preinstalación con concreto.

◆ Instalación de la Válvula de Preinstalación (pared de madera)

- 1: Fije la válvula de preinstalación directamente a la estructura de madera utilizando tornillos.

◆ Instalación del grifo de lavabo

1. Enrosque la brida de la maneta en el cartucho de válvula de la válvula empotrada hasta que quede firmemente fijada y nivelada.
2. Instale la maneta en el cartucho de válvula (con el orificio del tornillo orientado hacia abajo) y apriete el tornillo prisionero situado en la parte inferior.
3. Aplique cinta de teflón (cinta PTFE) en las roscas del conector de salida de agua. Enrosque cuidadosamente el conector en la salida central de la válvula empotrada y asegúrese de que quede bien fijado.
4. Alinee el orificio del tornillo prisionero de la brida del caño con el orificio del tornillo prisionero del caño y, a continuación, apriete el tornillo prisionero. Instale el conjunto del caño en el conector de salida de agua y apriete el tornillo situado en la parte inferior. Abra el agua y compruebe que no haya fugas en la conexión.
