

Outdoor Trash Containers with Slatted Recycled Plastic Panels

Outfitting your outdoor property with stable waste receptacles is imperative to eliminate litter. Our Outdoor Trash Container's with Recycled Panels are the most practical and resilient options. We wanted to design an appealing exterior; thus, our trash container is comprised of recycled plastic cedar slats that add a warm and natural aesthetic to its surroundings. Its authentic wood appearance makes it ideal for blending into walking trails, parks, recreational fields, and other wooded areas.

To guarantee it can handle various types of climates, the steel frame has a weather-resistant powder coating, ensuring its longevity with upholding its quality. Their rather substantially sized holding capacities of 32 and 40 gallons will require less emptying by your maintenance staff, helping reduce worker strain.

Our receptacles are excellent for parks, resorts, walking trails, recreational fields, outside offices, schools, and so much more. It's a no-brainer to outfit your facilities with our superior trash container with all these fantastic features.

FEATURES

Design: The recycled plastic cedar exterior adds warmth and a natural aesthetic, allowing it to blend seamlessly into its outdoor environment.

Hassle-Free: You will never need to worry about chipped or faded paint because recycled plastic doesn't require any painting or staining.

Durable: The recycled material won't crack or splinter, especially in harsh weather conditions.

Low Maintenance: Our substantially sized 32 and 40-gallon, leak-proof liners will require less emptying.

Free Flowing: Its slotted bottom will allow rain and snow to pass through and not build up.

Stability: The included mounting hardware enables you to secure the receptacle in place.

Efficiency: To better support your 32-Gallon receptacles, we highly recommend our Rain Bonnet to prevent water and snow from flooding the liner.
