Wood Dust

Why am I being warned about potential exposure to wood dust?

- Wood dust is on the <u>Proposition 65</u> list because it can cause cancer.
- Exposure to wood dust in significant amounts on a recurring basis can cause cancers of the nose, throat and sinuses.
- Proposition 65 requires businesses to determine if they must provide a warning about exposures to <u>listed chemicals</u>.

What is wood dust?

 Wood dust is generated when machines or tools are used to cut or shape timber and other wood materials. Activities like chipping, sawing, drilling, sanding or woodturning create wood dust.

How does exposure to wood dust occur?

• Cutting, shaping and sanding wood releases wood dust into the air, where it can be inhaled. Wood dust also settles onto tables, floors and other surfaces. When disturbed, it can become airborne again, and can be inhaled. Under dry conditions, small amounts of wood dust can be released into the air from handling materials such as wood chip mulch and compost that contains wood dust. Regular exposure to significant amounts of wood dust are of concern.

How can I reduce my exposure to wood dust?

- ✓ Work outside, if possible, when you are sanding or creating fine wood dust. Wear a dust mask that fits snugly and comfortably.
- If you often work with wood, are a hobbyist, or do home improvement projects with wood:
 - Consider installing a dust-collection or air-filtration system in your indoor work space to help capture and remove wood dust at the source.
 - Consider using a saw hood or a sanding table that has suction to pull dust particles downward to prevent inhalation, especially if you are sanding wood that is glued, laminated or has synthetic finishes.

O not use brooms, blowers, fans or compressed air to move the dust.

- Vacuum with a high-efficiency particulate air (HEPA) filter or use a shop vacuum cleaner with a HEPA filter, if possible.
- Use wet clean-up methods, such as removing dust with wet rags.
- Carefully bag and seal wood dust from vacuum or other dust extraction systems.

 Change out of clothes that contain wood dust before entering your home, car, or other areas.
