STEP 1

NEW LAWNS

OVERSEEDING

PREPARE

FOR BARE SPOTS/NEW LAWNS:
Remove debris, then rake the soil to loosen and smooth the top layer.

PARA ZONAS CON HUECOS O CÉSPED NUEVO: Retire los desechos y luego rastille la tierra para aflojar y suavizar la capa superior.

FOR OVERSEEDING/THIN AREAS:
Start by mowing existing grass as short as possible followed by removing debris. Then rake the soil to loosen and smooth the top layer.

PARA RESEMBRA O ZONAS DELGADAS: Corte el césped existente lo mas corto sea posible y elimine los desechos. Luego, rastille la tierra para aflojar y suavizar la capa superior.

STEP 2

APPLY

Spread the seed evenly using a drop, rotary or hand-held spreader according to the recommended spreader settings listed. Rake gently to work your seed & fertilizer into the soil.

Aplicación: Disemine las semillas de manera uniforme con un esparcador de caída, rotativo o manual, de acuerdo con las configuraciones recomendadas y enumerados del esparcador. Rastille suavemente para que las semillas y el fertilizante germinen en la tierra.

STEP 3

WATER

Keep the soil moist by watering daily as needed until grass sprouts and reaches about 3" tall.

Riego: Mantenga la tierra húmeda al regar lo que sea necesario por día hasta que el césped brote y alcance alrededor de 3 pulgadas (7,62 cm) de alto.

ADDITIONAL CARE TIPS

- 1 Mow lawn when grass height reaches 3" tall
- 2 Avoid removing more than 1/3 of the total grass blade length in any single mowing
- 3 Hot summers can be stressful on your lawn; increase the mowing height during hot and dry periods to reduce stress on lawn

MOST IMPORTANTLY - Don't kill the grass before it starts by using weed control (pros call it preemergent) on your lawn until your grass has reached its full mowing height of 3"
