

THE BETTER ICE SCRAPER

PATENTED

FAST! • SMART! • EASY!

Scrape Faster with Less Effort

Thank you for purchasing The Better Ice Scraper. Our unique, compact hand-held design clears your windshield better and faster—and lessens strain on your hand and wrist. Our numerous innovations provide a better way to remove ice and frost from windshields.

Using The Better Ice Scraper

- Hold in the palm as illustrated. In all cases, best results are obtained when both the ice chipping teeth and frost edge contact the glass surface at the same time.
- The Better Ice Scraper can be moved back and forth across the glass in any direction. Just make sure when clearing thicker and harder ice to impact solid ice first with the Ice teeth.

Clear Away Ice in One Clean Motion!

Place the rugged ice and frost edges against the glass at the same time. Crack tough ice with the Ice edge and clear it away with the Frost edge that follows right behind—to chip and clear away ice in one motion.

Remember these tips:

- DO NOT use scraper on painted surfaces
- DO NOT pound with or use scraper as a hammer
- DO NOT ram thick, hard ice with the frost edge—use the ice teeth.
- For best chipping results with thick ice, use a corner ice tooth to get chipping started. Then use normally to continue to chip and clear away ice.
- KEEP YOUR WINDSHIELD CLEAR OF SAND AND GRIT. Moving sand and grit over your windshield may cause scratching. Use windshield washers often, especially before parking your car, so the windshield is clean when ice and frost form.
