BLOOM TIME Late Spring

LIGHT Full Sun, Partial Shade

SPACING 1-2" apart, (12 per sq. ft.)

DEPTH Plant 3-4" deep

MATURE HEIGHT 12-14" tall

BENEFITS Deer Resistant

Soil Preparation

Great gardens start with great soil!
Soil preparation is essential for successful gardening.

Flower bulbs prefer loose, well-drained soil rich in organic material. Start by removing weeds, rocks and debris from the planting area. Loosen the soil to a depth of approximately 12 inches and mix in organic matter such as peat moss, compost, manure, or a combination. This is especially important if you are planting in an area with heavy clay or ground that tends to hold moisture. Properly preparing the soil before planting will keep the bulbs from rotting and helps the roots to access oxygen and nutrients in the soil. This is a crucial step to ensure happy, healthy and beautiful plants.

NOTE: It is important to store bulbs correctly until they are planted. Unpack the bulbs and store them in a cool, dry place with plenty of air circulation, where the temperature is between 40-70°F.

Bulb Planting Instructions

- 1 Plant bulbs in the fall when the ground cools and before the first hard frost. Outside temperature should be about 65°F or cooler.
- 2 Select a well-drained location that receives full sun to partial shade.
- 3 Dig a hole 3-4" deep in loosened soil and place bulbs in the hole. Bulbs should be spaced about 1-2" apart. Plant them in the ground with their pointy ends up.
- 4 Cover with soil and water well so the soil above the bulb settles.

Ongoing Hyacinth Care

Caring for your Hyacinths after they bloom is very simple. Once they fade to yellow and dry up, do not cut the foliage, you will want to leave them where they are to absorb the sunlight that helps produce the energy needed for next years blooms. They should bloom again next spring. If desired, you can also divide your hyacinths. It is recommended to do so every two to three years. To do this, take a trowel and carefully dig around the bed of the plant. You should find a collection of bulbs. Dig them up and gently separate with your hands. You can replant some of them in the same spot and others in new locations right away. They should bloom again the following spring.

CONTACT US

FREQUENTLY ASKED QUESTIONS

Q. When should I plant hyacinth bulbs?

A. Hyacinth bulbs need to be planted in fall or early winter. Basic rule of planting would be when the soil is 60°F or cooler.

Q. What other flowers can you plant with hyacinths?

A. Plant your Hyacinths with tulips, crocuses, alliums, daffodils or irises for a beautiful display!

Q. Do hyacinths come back every year?

A. Hyacinths are perennial and will happily bloom year after year if you care for them properly.
