Before you throw away the box, please check that you have all the parts listed below. If any are missing, please contact our customer service at the number above and we will gladly ship your replacement parts free of charge.

INSTALLATION INSTRUCTIONS

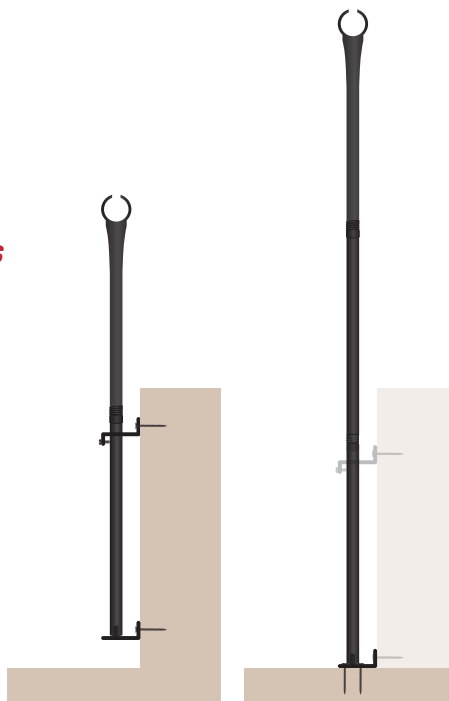

Installing the Deck/Fence Light Poles

Tools/Materials Needed:

- Impact/Drill
- Screwdriver
- Level

There are two ways to mount the deck pole:

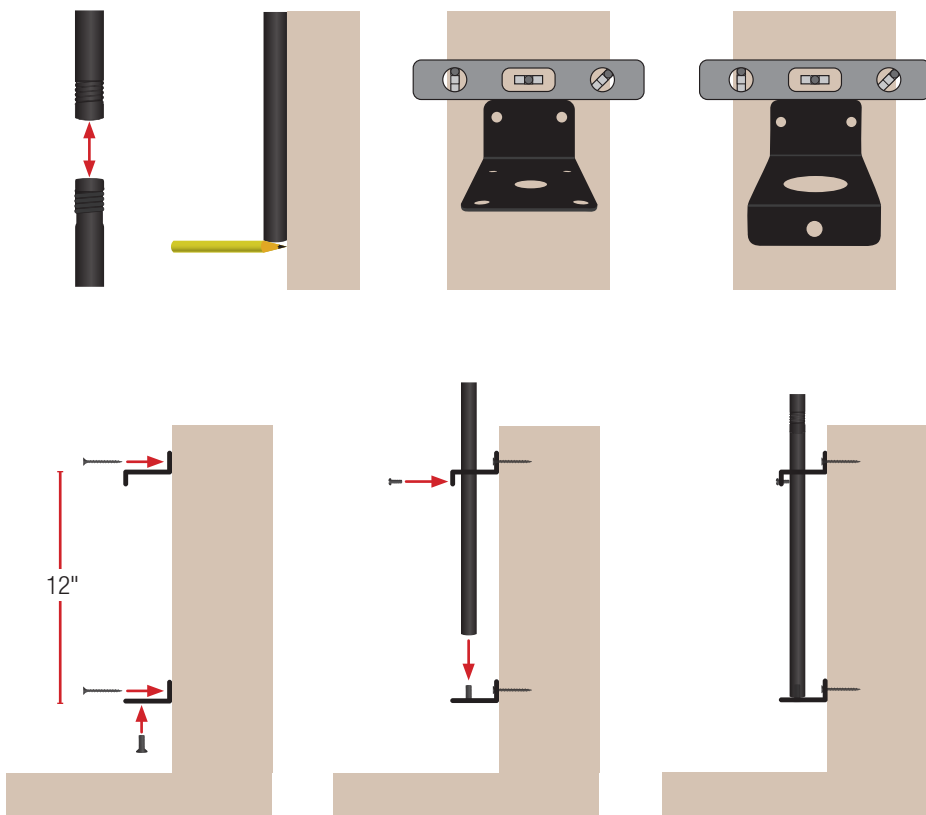

1. On the side of the deck and
2. On the top of the deck.

For Installation on the Side of the Deck.

For this option you will need a base anchor and a side anchor for each pole.

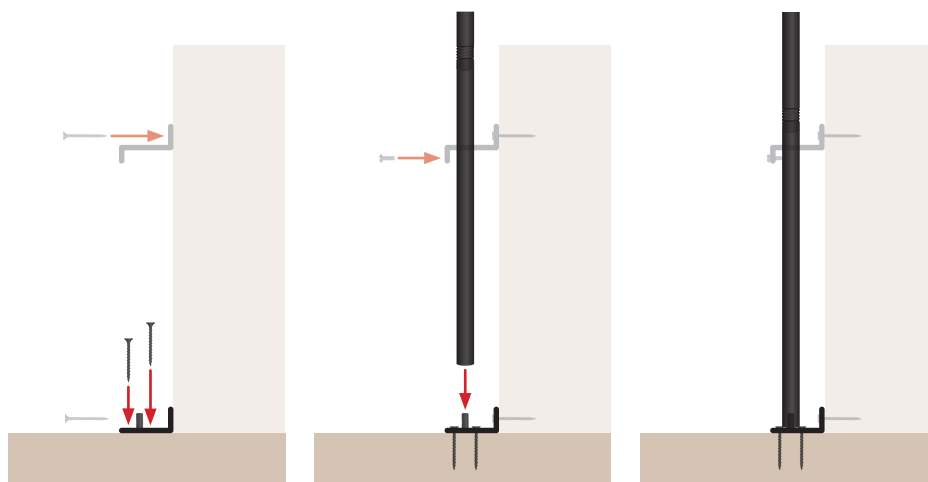

1. Select a flat deck post or other flat surface to mount to and preassemble pole by screwing together a base piece, two of the connecting pieces (or one if you want it shorter), and the topper.
2. Once the pole is connected, put the pole next to the installation area and mark under the bottom of the pole when your pole is at the preferred height.
3. Make sure there is at least a 12" of room in between the base piece and where you will install the side anchor.
4. Use a level to install the base piece making sure the base makes an 'L' against the post. You can use the pole to pick the right height for the side anchor by inserting the pole through the hole and adjusting the gap between the side and base anchors. The higher you put the side anchor the stronger the support will be.
5. Once you have the side anchor in line with the base piece, remove the pole, level the piece and screw it in.
6. The last step is to use the provided base screw to secure the pole to the base anchor.

For Installation on the Top of the Deck.

1. For this option you will need a base anchor per pole.
2. Select a flat Deck Post top or other flat surface to mount to and preassemble pole by screwing together a base piece, two of the connecting pieces (or 1 if you want it shorter), and the topper.
3. Once the pole is connected use the provided base screw to connect it the base anchor with the anchor side facing up like an 'L'.
4. Screw into desired post/surface by going diagonally or using a drill extension to keep pole level.

NOTE: You may optionally install on both a deck surface and a post or wall if desired (see lightened areas of images below).
