

EASY INSTALLATION

According to the different bathroom accessories to install, firstly check the corresponding distance needed between the mounting plate(s) for marking proper location(s) for the mounting plate(s) on wall.

- 1) Place the mounting plate(s), Fig. 1, vertically at the corresponding location(s) on wall. Then, mark the screw holes locations on wall through the upper & lower holes at the mounting plate.
- 2) Take away the mounting plate. Drill holes at the marked screw locations, Fig.2. On ceramic tiles, try to locate screw hole(s) on grout line. If mounting on tile surface, use masking tape to do marking & to prevent sliding during drilling.

- 3) Push the plastic anchors provided into the holes until flush with wall. Then, screw mounting plates to wall with the screws provided, Fig. 3.
Note : Molly or toggle bolts (not included) may be required for hollow wall.
- 4) At last, place the Bracket clipping over mounting plate. Position the Bracket with set screw on its bottom side. Unscrew the set screw a little bit for proper fitting. Clip the Bracket with its upper end to mounting plate first. Then, push the Bracket completely to flush with the wall. Tighten the set screw to lock with mounting plate on wall

For product with two Brackets such as towel bars & some of the tissue paper holders, suggest to mount one Bracket first, then put the towel bar or tissue paper holder in place. Check to ensure the assembly is level, and finish the mounting of the other Bracket.

Important

: To check that the product is securely mounted after assembly, pull the product slightly. If not mounted properly, unscrew the set screw and re-tighten once again.
