

## Windshield Mounting

6 Wire Clips & Cable Routing Tool

Vehicle Charger

Electrostatic Film

- Find an area on your vehicle's windshield that is centrally located and close to the top of the windshield. Make sure the mounting area on the windshield is clean. The dash cam should be mounted so the display is easily visible to the driver. (Optional: Place the included electrostatic film on the desired location for a semi-permanent install).
- Plug the power cable into the dash cam and then route the power cable along the headliner using the included tool and cable routing clips as needed.

Rotate front camera lens so that it is parallel with the road.

Rotate the interior cam so that it captures a view of the driver and passengers.

## Camera Tips

- Your dash cam features continuous loop recording, which deletes your oldest videos on the included SD card to make space for new recordings. Save your favorite clips from being overwritten by pressing the Action Button.
- If you need to format the SD card, please do so in the camera itself within the settings menu. Do not format the SD card on your PC.
- The dash cam may occasionally prompt you to format your SD card. This is done to ensure continuous recording operation, but this action will delete your saved footage. Before formatting, download and save your favorite clips using the Drive Smarter® app or by connecting the camera to your PC with the included data cable.
- Parking Mode requires a hardwire connection to the vehicle's battery or OBD-II port to power the camera while the vehicle is off (Hardwire Kit available on Cobra.com).
- Parking Live View requires an internet connection for the camera (in-vehicle hotspot or nearby WiFi access point) in order to stream a live feed from the camera to the account holder's Drive Smarter app. Please consult the owner's manual for more details.

**⚠** If upgrading your SD card, please visit [Cobra.com](http://Cobra.com) for a list of compatible cards.
