Assembling the Chair

STEP 1

Unbox chair and place in designated area.

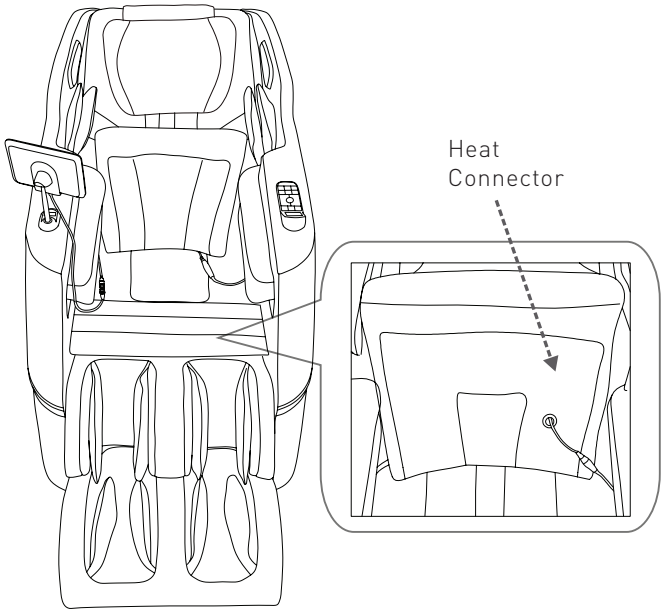

STEP 2

Carefully, flip the footrest down from the seat so it sits in front of the chair base.

STEP 3

Connect the heat by pressing the line located on the back right of the main body of the chair, together with the heat line located on the under side of the Back/Seat Pad.

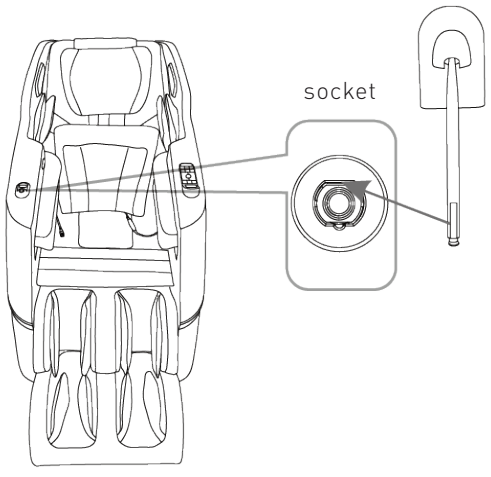

STEP 4

Remove the protective strips from the velcro located on the underside of the seat pad, and the flap on the top of the footrest. Then, position the seat pad by lying it down on the base of the chair, and pressing the velcro located at the front edge of the seat pad to the complementing velcro on the top of the footrest.

STEP 5

To install the controller holder, align it with the designated socket located on the right armrest. Ensure the shape of the holder matches the socket opening. Gently push the holder into the socket until the bottom screw of the bracket securely clicks into place. You should feel a positive snap indicating it is properly installed.

STEP 6

Power on and begin using the chair.

A) Plug the power cord into the back base of the chair (Figure 5A), and

B) Turn on the main power switch (Figure 5B)
