

Pool Pumps

Two-Speed Pool Pumps

My previous pump was a single-speed pump and this one is a two-speed pump with an extra wire, how do I hook it up?

The two-speed pump does have an extra wire so you can run it on low or high speed which is much more energy efficient than the single speed. Instructions on how to wire the pump with the two-speed function are in the manual. If you have additional questions or need help with the wiring, contact our Technical Support Team at (844)-242-2475

The pump is not pulling as strong as my previous pump, and I can see air bubbles below the lid, why is this happening?

Ensure there is no air coming in through a leak. If there is no leak, make sure the union nut and adapter have their O-rings secured and are in the correct position. Also check the O-ring on the lid. O-Rings can move when removing the lid so make sure they are in their correct position when replacing.

My pump will not prime. What should I do?

Make sure the pump is on high speed during the priming process. If the pump is not in a flooded suction (water source higher than the pump), application, remove the trap cover and fill the trap and pump with water. Make sure the pump is on high speed and turn it on.

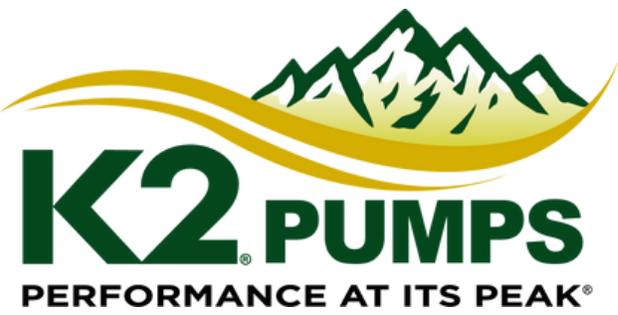

My previous pump had a switch to move from 230V to 115V, where is that switch on this pump?

Our two speed pumps run exclusively on 230V, using less energy and running more efficiently in the long term.

Where can I purchase parts for this pump?

Please call us at (844) 242-2475 and we will assist you on ensuring you purchase the correct parts.

FAQs

Pool Pumps

Variable Speed Pool Pumps

Can I connect my own timer to this pump?

Unfortunately, you cannot. You must use the timer attached to the pump for the pump to work correctly. If you need assistance setting up the timer, please call us at (844) 242-2475.

My pump will not prime. What should I do?

Make sure the pump is on high speed during the priming process. If the pump is not in a flooded suction (water source higher than the pump), application, remove the trap cover and fill the trap and pump with water. Make sure the pump is on high speed and turn it on.
