

Air & Water Barrier System
eliminates the need for house wrap

Protection and Performance inside and out

The ForceField™ air and water barrier system from Georgia-Pacific consists of structural engineered wood sheathing panels laminated with a proprietary air and water barrier. Once the panels are installed on a structure and the panel seams are taped with ForceField™ seam tape, it creates a code-compliant, integrated system for residential or light commercial construction that eliminates the need for house wrap.

Helps Save You Time and Money

The ForceField system eliminates the need for house wrap. When you do away with this step it helps save you time and labor costs, which ultimately lowers your total installed cost. ForceField requires only one installer to tape the seams between the panels. House wrap takes at least two installers. Plus, house wrap requires special attention for window and corner details, whereas ForceField makes it easy to flash windows, doors and other penetrations. You'll never have to deal with re-working blown off house wrap again.

Helps Prevent Water Intrusion

The proprietary overlay which ForceField panel has been specially designed to prevent the risk of moisture between the panels. This overlay creates a barrier that is also vapor permeable, allowing it to promote drying. Once installed and the seams are taped, the ForceField system prevents air infiltration, which creates a more energy efficient building.

Installs just like standard OSB or plywood

Can help save time and labor costs

Complete water and air resistive barrier

Tape performs in temperatures as low as zero degrees

Apply and cut tape with your own hands

Code Compliant

Water & Air Infiltration

ForceField is bonded to the top of a roof specifically designed to reduce water infiltration. The overlay and the panel itself. ForceField keeps water out, but is designed to let water vapor to escape and maintain the roof and the building system. ForceField helps protect your home.

ForceField Tape - Easy To Install, Easy to Use.

ForceField seam tape has a highly modified acrylic adhesive designed to work at temperatures as low as 0° F. This means you don't have to worry about work being delayed in extremely cold temperatures. Also, ForceField tape not only creates a strong bond, but is light in weight and is serrated so it's easy to tear. No utility knives or special applicators are necessary. UV and weather resistant, it comes in convenient 165 foot rolls, so you don't have to worry about running out of tape so often.
