

# Installation Steps

Easy-to-follow instructions enclosed.

1. Select one of the 3 different installation drawings to determine how to install. The dimensions shown must match for top and bottom, otherwise the product may not function properly.
2. As shown in the installation drawings, Part C—Top needs to be upturned and Part C-Bottom needs to be down-turned.
3. Select the center position of the round mounting hardware (Part A) on the wall of cabinet based on the desired open position. Measurements of installation must match for both top and bottom for the product to work properly. Mark the center point, then attach to the cabinet wall utilizing 3 screws. Installation size is about 250-260mm from the outside of the cabinet wall/frame.
4. Select the center position of the hardware (Part B) on the door utilizing the dimensions of the same drawing in step 2. Mark the center point then attach to the door utilizing two screws. Installation size is about 80-100mm from the outside edge of the hinge side of the door frame.
5. Connect the joints and the strut.
