

## DIY Table Assembly Instructions

Read these instructions completely before assembling your new table.

Tools needed: Phillips screwdriver

**Step 1:** Finish your table to the desired color with quality paint or stain. (Tip: finish your individual pieces before assembly of the complete table)

**Step 2:** Place table top on a flat, level working surface with the bottom facing up. The bottom will be clearly marked. (Tip: Place your table top on a non-marring surface to prevent scratches)

**Step 3:** Align the hinged table apron with the stenciled marks on the bottom of the table. When placed properly, the apron will be square and evenly spaced from the outside edges of the table top. Once properly aligned, secure the apron to the bottom of the table top using the provided wood screws.

**Step 4:** Each table leg has slots cut into the back side. Position table legs one at a time in the corners of the table apron. When properly installed the top of the table leg will sit flush on the bottom of the table top.

**Step 5:** Using the provided machine screws, secure the table legs to the table apron. Align the screw holes in the table leg with the holes in the table apron on each corner. Install the provided screws and tighten to secure the legs to the apron. Repeat this process for each table leg.
