

SnapFence® Wall Topper Kit — Home Depot Q&A

Q1 — Can this wall topper kit be installed directly into the ground?

Answer:

No. This SnapFence® Wall Topper Kit is designed to be installed on top of an existing wall or similar structure. It is not a ground-installed fence and is not intended to stand alone in soil.

If you need a ground-installed fence, choose a SnapFence® In-Ground Fence Frame Kit instead.

Q2 — How tall is this wall topper?

Answer:

This SnapFence® Wall Topper Kit adds approximately 17 inches of height. It is designed to add decorative privacy, curb appeal, light screening, and a finished look to an existing wall.

It is not a 4 ft. tall fence. For a taller fence, privacy screen, or enclosure, choose one of the SnapFence® 4 ft. frame kits.

Q3 — Does this wall topper include the lattice panels?

Answer:

Yes. This SnapFence® Wall Topper Kit is sold as a complete wall-topper kit for this application and includes the lattice panels.

This is different from the SnapFence® 4 ft. frame-only kits, where lattice, hardware cloth, or wire fencing is sold separately and available at The Home Depot.

Q4 — Can I add or replace solar lights on this wall topper?

Answer:

Yes. The SnapFence® Wall Topper Kit is designed with pre-drilled post holes that make it easy to place compatible solar lights into the posts. This gives you flexibility to choose the solar light style you prefer instead of being locked into one specific fence-topper light.

Compatible solar lights can be placed into the post holes, removed, or replaced more easily if you want to change the look later. Solar lights are not included with this kit and are sold separately. For best results, choose solar lights that fit the SnapFence® post opening and ask a Home Depot associate which solar light option is best for your application.

Q5 — Are the fasteners for attaching the wall topper to the wall included?**Answer:**

No. Wall-mounting fasteners are not included because the correct fastener depends on the surface you are attaching to, such as wood, brick, concrete, block, masonry, or composite material.

Use fasteners appropriate for your wall material and installation conditions. For best results, ask a Home Depot associate which anchor or fastener is best for your application.

Q6 — What type of wall can this wall topper be installed on?**Answer:**

The SnapFence® Wall Topper Kit is designed to be installed on top of a suitable existing wall or similar structure, such as masonry, block, concrete, wood, brick, or other stable surfaces.

The wall must be strong enough to support the wall topper and the fasteners selected for your wall material. Always choose fasteners appropriate for your specific wall surface and installation conditions.

Q7 — Can this wall topper be cut to fit my wall?**Answer:**

Yes. SnapFence® PVC components are durable for outdoor use but easy to cut with a standard hand saw or common cutting tool. This allows you to adjust the wall topper length to better fit your wall layout.

Always measure your wall before cutting and follow the installation instructions.

Q8 — Can I connect multiple wall topper kits together?**Answer:**

Yes. SnapFence® Wall Topper Kits are modular and can be used together to extend along a longer wall. This makes it easier to add decorative height, curb appeal, and light screening across a larger wall area.

Plan your layout before installation and use fasteners appropriate for your wall material.

Q9 — Can this wall topper help improve privacy without blocking all light and airflow?**Answer:**

Yes. The SnapFence® Wall Topper Kit is designed to add decorative height, light privacy, curb appeal, and screening to an existing wall while still allowing some light and airflow through the lattice design.

It is not a solid privacy wall or full-height fence. If you need a taller privacy screen, choose one of the SnapFence® 4 ft. frame kits.

Q10 — Is this wall topper a complete kit or a frame-only kit?**Answer:**

This SnapFence® Wall Topper Kit is a complete kit for this wall-topper application and includes the lattice panels.

It is different from the SnapFence® 4 ft. frame-only kits, where lattice, hardware cloth, or wire fencing is sold separately and available at The Home Depot.

Q11 — Can this wall topper improve the look of an older block, brick, or masonry wall?**Answer:**

Yes. The SnapFence® Wall Topper Kit can help improve the appearance of an existing block, brick, masonry, concrete, or wood wall by adding decorative height and a clean finished lattice look.

The wall must be stable and strong enough to support the wall topper and the fasteners selected for your wall material.

Q12 — Is this wall topper easy to install?**Answer:**

Yes. The SnapFence® Wall Topper Kit is designed for DIY-friendly installation on top of a suitable existing wall or similar structure. The PVC components are durable for outdoor use but easy to cut with a standard hand saw or common cutting tool.

Wall-mounting fasteners are not included because the correct fastener depends on your wall material. For best results, ask a Home Depot associate which anchor or fastener is best for your application.

Q13 — Is this wall topper meant for full privacy or security?

Answer:

No. This SnapFence® Wall Topper Kit adds approximately 17 inches of decorative height to an existing wall. It can improve curb appeal, add light screening, and create a more finished look, but it is not a full privacy fence, 4 ft. fence, or security barrier.

For a taller fence, privacy screen, pet enclosure, garden fence, or hard-surface screen, choose one of the SnapFence® 4 ft. frame kits.
