

# **RAT ZAPPER®**

## **Classic**

## **Electronic Rat Trap**

### **Instructions**

1. Remove the battery cover. Insert 4 “AA” batteries. Replace the battery cover.
2. Bait the trap through the entrance placing a small amount of peanut butter, bacon, dry pet food, nuts, etc. on or along the back wall. Be sure to use a Q-tip, toothpick or another tool to bait so your scent is not transferred onto the trap.
3. Place the trap where you have seen signs of rodent activity or along the wall where rodents primarily travel. The trap should be placed lengthwise against the wall with the entrance hole nearest the wall.
4. Turn on the trap – a red light will blink once showing the trap is working properly.
5. A blinking red light will indicate a kill. Dispose of the dead rodent, bait, reset and place for continued rodent control.
