

No Screws or Nails
No Tools Needed

Each side has a hook and a arrow
for connection. You can slide or snap
each shield together.

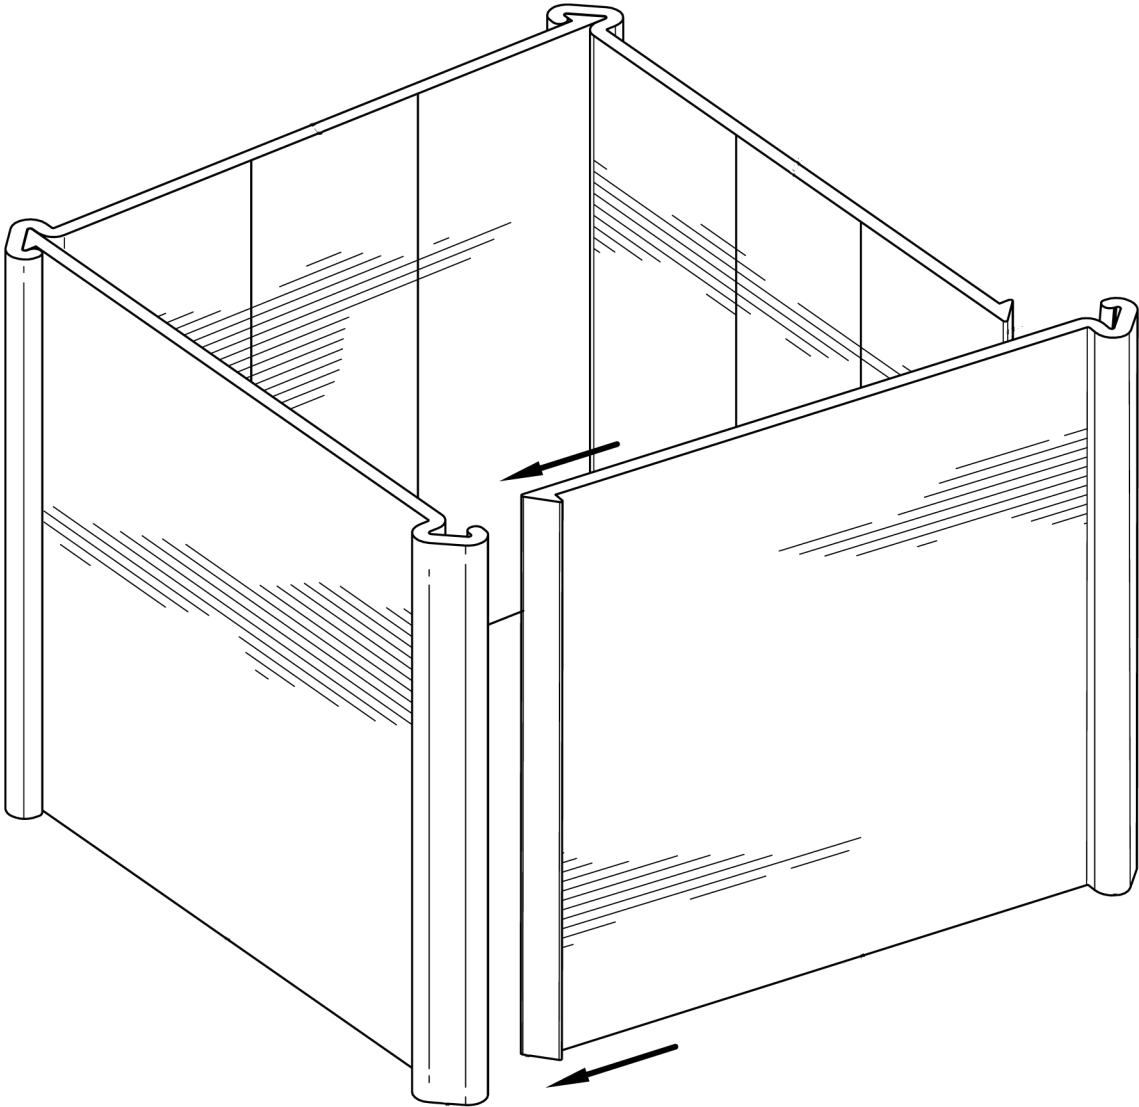

This example shows the preferred method of installation: Snapping the shields together

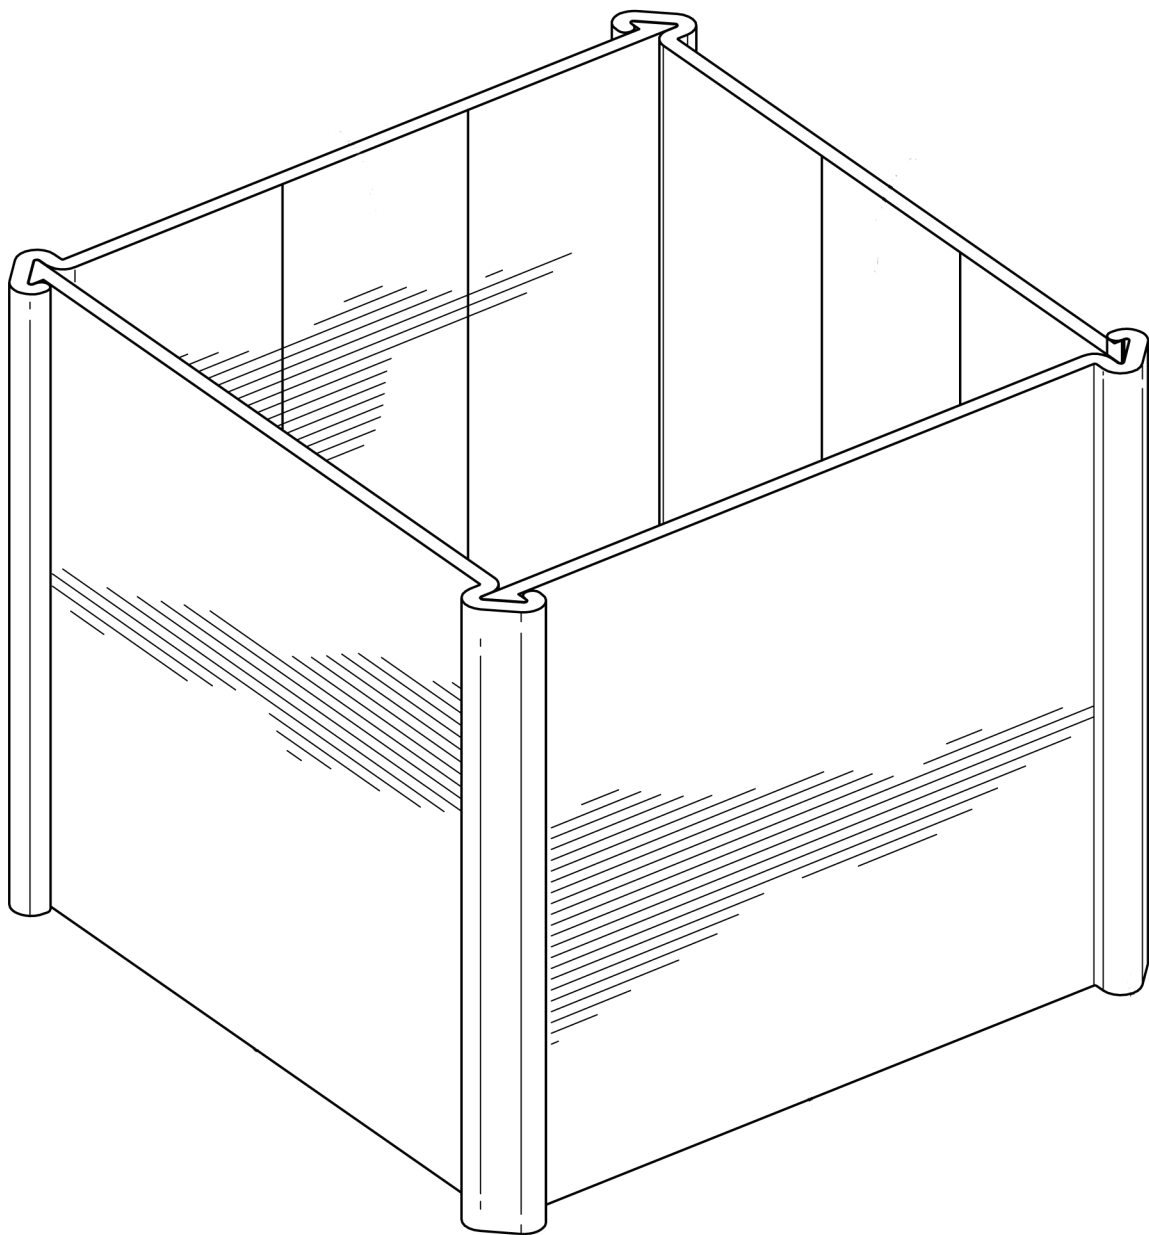

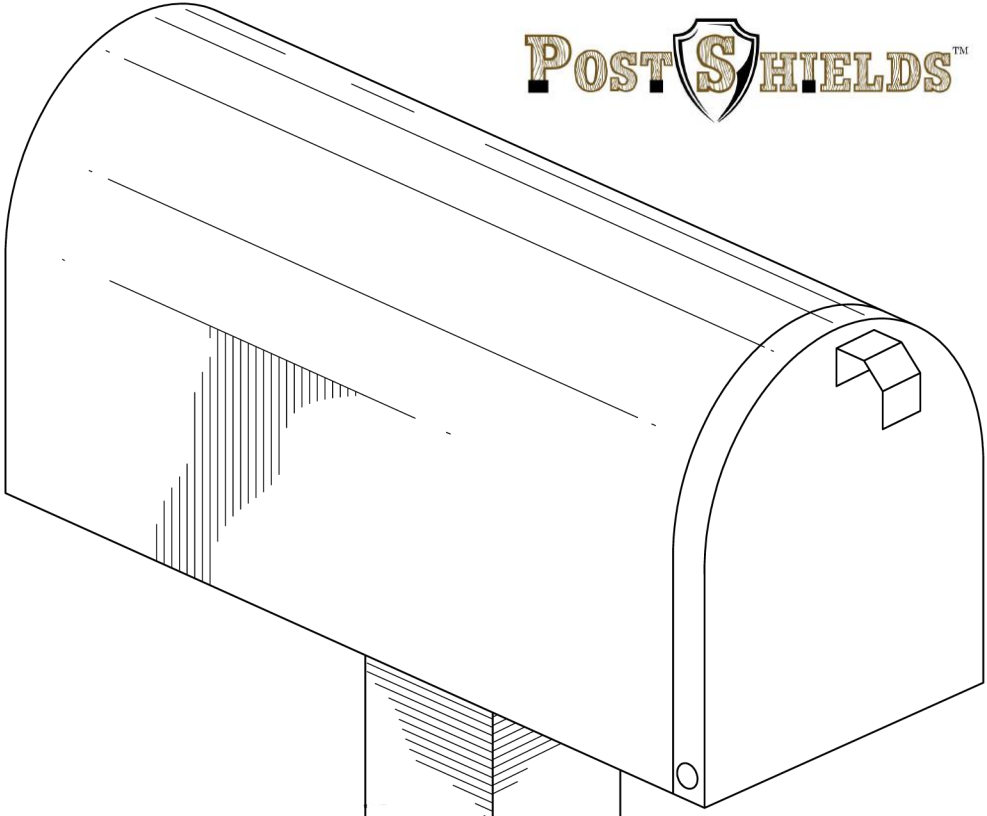

Push the arrow side of the shield into the hook side with some force. You could use a rubber mallet if needed

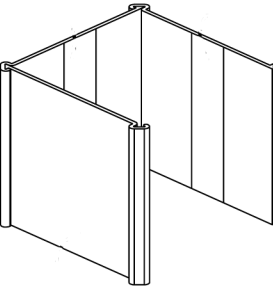

You will hear a snap sound when they connect
creating your complete protection around your post.

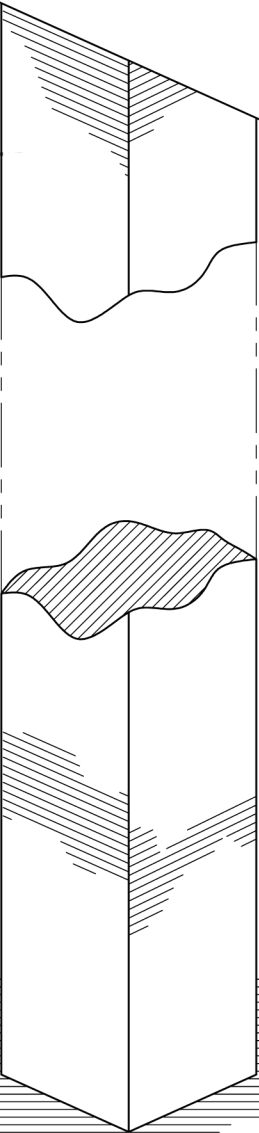

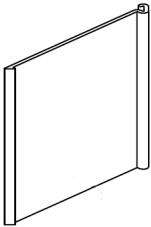

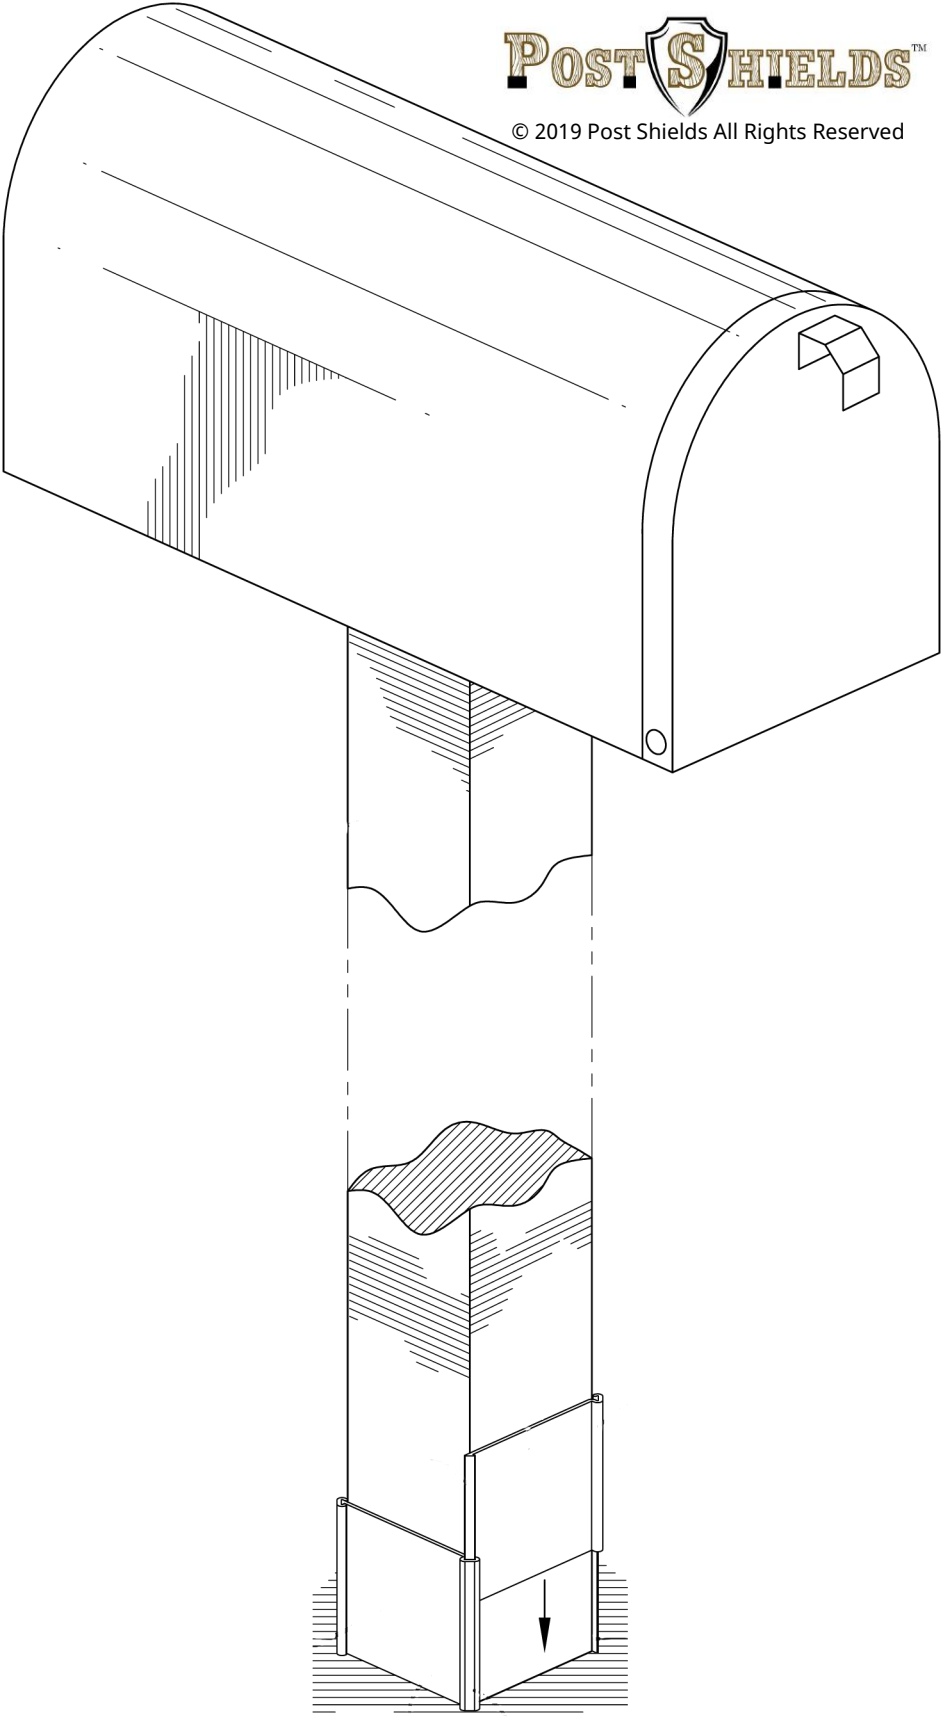

Assemble 3 shields together
and wrap around the post

Then slide or snap the
last shield into place

If sliding the shields, align the hook and arrow and push down. There will be some friction and will take some force. You could use a rubber mallet if needed.
