

Struggling with hard-to-reach outlets?

Now there's an easier way to plug in and charge up, by putting the power exactly where you want it.

MEET THE RADIANT® IN-WALL OUTLET RELOCATION KIT

This DIY kit is the perfect answer for any of those outlets inconveniently located behind a bed, dresser or couch. No more crawling under, reaching behind or around, or moving heavy furniture to get to the outlet you need. With this code-compliant, pre-wired kit, you can neatly route the power behind the wall, extending it from the hard-to-reach outlet and adding a new, designer outlet in your preferred location for more convenient access. All it takes is a few household tools – no electrician required.

An easier way to charge is just **30 minutes** away.

- Extends an existing outlet's power to a new designer outlet in your preferred location, running neatly behind the wall for more convenient power access without the mess of visible cords.
- Moves power up to 4' vertically / 6' horizontally from the original outlet for flexible placement.
- Installs easily, no electrician required, in as little as 30 minutes. Required tools for DIY: hand drywall saw, tape measure, pencil, fish tape and screwdriver.
- Available in two versions. Opt for a radiant® Tamper-Resistant Outlet, or upgrade to add convenient built-in USB charging with a radiant® USB Outlet.
- USB Charging version includes both USB Type-A and the future-proof USB Type-C ports to easily charge even the latest devices without a bulky adapter. Also includes traditional, tamper-resistant power access.
- Both options protect children with a patented tamper-resistant shutter system on the new outlet that prevents improper insertion of foreign objects. Includes "invisi-shutters" for an invisible effect.
- Featuring the sleek lines and designer style of the radiant Collection, you can coordinate this solution with other radiant switches and outlets for a consistent look throughout your home.

designed to be better.
