

VanZyverden's
BEGONIA NON-STOP MIX

Tuberous begonias were discovered in the forests of Bolivia and Peru. Next to bedding begonias 'semperflorens' tuberous begonias are probably the best-known, most widely grown and are enjoyed by the average gardener around the world. Growing and caring for begonias is easy, especially when growing from tubers. They produce stunning showy large flowers.

Bold color for the shade

Suitable for pots & hanging baskets

*Great with other flowering plants
in mixed containers*

About This Variety: These non-stop begonias are double flowering, well branched and are an excellent choice for containers. Great for garden beds as well.

Growing Instructions: In the North, tubers should be started indoors in late winter or early spring to bloom by summer. Once weather permits, after danger of frost, they can be moved outdoors. Plant concave side up. Growing begonias from tubers requires warm temperatures. Plant 1 tuber per 7-10" pot.

Care Tip: These are not plants for the deep South or desert Southwest since they do not grow well in hot, arid environments without special care. Shade from hot sunlight, but allow some sun. Keep containers moist and avoid overwatering. Removing any wilted leaves or flowers will encourage the plants to produce more flowers.

Blooms: Early Summer

Exposure: Partial Shade to Full Shade

Height: Grows 8-12" tall

Spacing: Plant 12" apart, 1-2" deep

USDA Zones: Hardy in USDA zones 9-10

Guaranteed to grow 1 year from purchase if directions are followed. Any concerns related to quality and/or counts feel free to contact us.
