Endless Summer® Hydrangeas

## Easy to care for. Easy to love.

- Dig hole 1½ times the size of the pot.
- Remove from pot and place in hole.
- Fill in with existing soil and compost. Add 2"–3" of mulch to retain moisture.
- Keep soil evenly moist, not wet, and enjoy!

**SPRING:** After final frost, remove winter mulch and apply a slow-release fertilizer. Prune above new green growth if needed. Removing stems below green growth results in fewer flowers.

**SUMMER:** Water so that the soil stays consistently moist.

**FALL:** Do not prune or fertilize. After leaves drop, cover plant with mulch (straw, pine straw, oak leaves, hardwood bark) to protect early flower buds.

**PRINTEMPS:** Après le dernier gel, enlever le paillis mis en place pour l'hiver et fertiliser avec un engrais à libération lente. Tailler la nouvelle pousse verte au besoin. La tailler des tiges en dessous de la pousse verte réduira le nombre des fleurs.

**ÉTÉ:** Arroser pour garder la terre toujours humide.

**AUTOMNE:** Ne pas tailler et ne pas fertiliser. Après la chute des feuilles, couvrir le plant de paillis (paille, aiguilles de pin, feuilles de chêne, écorces de bois dur) afin de protéger les boutons floraux déjà formés.
