WHY CARPENTER BEE TRAPS?

- Prevents/stops carpenter bee damage
- Hang, set or mount on any wooden structure
- No chemicals or skill needed
- Set it and forget it

HOW?

- 1) Carpenter bee flies into the hole on the side of the trap
- 2) Once inside they fly to the light coming in from the jar
- 3) Once in the jar the bees are trapped!

SEE INSTRUCTIONS INSIDE

WHEN TO USE?

Traps should be in place before/during spring when the bees are most active. Once average temps are above **90 degrees** carpenter bees are much less active, **which make the traps less effective.**

WARNING:

- **DO NOT** touch live carpenter bees, they can hurt you.
- **DO NOT** hang in trees or bushes.
- **THE TRAP SHOULD NOT BE** able to sway in the wind.
(see helpful tips video at www.carpenterbeetraps.com)
- **IT IS NOT UNCOMMON** to see a bee fly **in and out** of the trap. This is actually a good sign.
- **DO NOT** paint or stain trap within 3 months of intended use.

INSTRUCTIONS

- 1) Mount, hang or set as close as possible to where the bees are already making holes. The bees must see the trap in order for it to work.
 - a) If hanging, the trap should not be able to move.
- 2) When jar fills up discard the bees.
 - a) If releasing live bees, take entire trap at least 1 mile away and release the bees.
 - b) Return trap to original position.
- 3) If you do not have existing damage just hang, set or mount trap on the sunniest side of the structure.

If the trap has not caught any bees within two weeks move the trap to a new location. LOCATION is the most important factor.

REMEMBER TO

- Show us your catch at www.carpenterbeetraps.com
- **LIKE US** on Facebook, search Bees N Things
- Buy bee dams to repair bee holes!

CUSTOMER SATISFACTION

When I started this business, its primary purpose was to get me through college. I never thought in a million years it would grow to this level. That being said, I take it personally when a customer is not happy with my products and will do anything in my power to make them happy. Before returning the product, please email me directly at beesnthings@gmail.com. The email comes straight to my phone and I will assist you as quickly as possible!
