## ONE FLUSH SEPTIC & PLUMBING TREATMENT CONCENTRATE

### WHY YOU SHOULD USE ONE FLUSH®

Your septic system needs bacteria to break down organic matter to stay effective and efficient. Every time you shower, brush your teeth, wash clothes or even dishes you send high concentrations of pollutants into your septic or grey-water system. Today's antibacterial products, disinfectants, deodorant soaps, toilet bowl cleaners, bleach, and even mouthwash kill the beneficial bacteria that are needed to keep your septic system working properly.

**ONE FLUSH®** was originally designed for industrial and municipal waste treatment facilities. Eight different strains of bio-genetically engineered bacteria digest and biodegrade today's antibacterial products, disinfectants, deodorant soaps, toilet bowl cleaners, bleach, and even mouthwash that kill the beneficial bacteria that are needed to keep your septic system working.

The efficiency and versatility of **ONE FLUSH®** also make it essential for preventing and solving many problems around the kitchen, bathroom, laundry room. **ONE FLUSH®** can be used for Septic and Greywater Systems, Cesspools, Dry Wells, Leach Fields, Drains, Garbage Disposals, Grease Traps, Outhouses, RV, camper, Pit Toilets and Manure Pits, Lagoons and even to make Compost for your yard and garden.

**DROP IN ONE DISSOLUBLE POUCH TO RELEASE BILLIONS OF BENEFICIAL BACTERIA THAT DIGEST SEPTIC WASTE FOR WEEKS!**

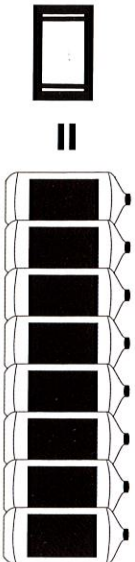

DROP IT IN

JUST FLUSH & YOU'RE DONE!

**USE ONE FLUSH® EVERY MONTH TO HELP KEEP YOUR SEPTIC TANK PROBLEM FREE..**

**1 ONE FLUSH® DISSOLUBLE POUCH = 141 BOTTLES OF 8 OZ. LIQUID SEPTIC TREATMENT PRODUCT**

# ONE FLUSH

## SEPTIC TREATMENT CONCENTRATE

### DIRECTIONS FOR USE

#### SEPTIC SYSTEMS AND CESSPOOLS

**Normal Maintenance** – drop one (1) unopened dissolvable pouch into toilet and flush. Repeat treatment monthly.

**Problem Systems** – odors, sluggish flushing and wet leach fields may be treated by one or two pouches a week for one month. Resume monthly treatments to avoid further problems.

**Severe Problems** – toilet backing up or overflowing, foul smelling gases from toilet, black foul smelling puddles on leach fields means it is probably too late for **ONE FLUSH®**. Seek professional help. Use **ONE FLUSH®** monthly after problem is corrected.

#### GREASE TRAPS

**Normal Maintenance** – drop one to four pouches (depending on size and load) into drain closest to trap, followed by one gallon of very warm water (below 120°F or 50°C). Treat during least used time. Repeat weekly, twice a week or more often, depending on size and load.

**Problem Traps** – pre-dissolve two to eight pouches, depending on problem, in one to two gallons of very warm water. Allow to soak for 15 to 20 minutes while punching holes or channels in grease deposits. Shake mixture and add to holes or channels and allow to remain overnight if possible. Resume normal maintenance.

#### LAGOONS

**Normal Maintenance** – pre-dissolve eight pouches per million gallons daily in one to two gallons of very warm water. Pour directly into the lagoon. Repeat treatment weekly.

#### RV TOILETS

Normal Maintenance – drop one pouch into toilet and flush. Repeat treatment monthly.

#### EVEN MAKE COMPOST

Compost may be produced by using **ONE FLUSH®** in as little as two weeks, depending on particle size and material type. The smaller the particle size, the faster the digestion. Pre-dissolve one or two pouches of **ONE FLUSH®** in one or two gallons of very warm water. Sprinkle between layers of material to be composted.

#### CALENDAR REMINDER

**Enclosed you will find three (3) different reminder stickers. Place one sticker on your calendar 30 days from initial treatment and 30 days after that to insure proper maintenance.**

## CAUTION:

Do not eat contents or breathe the dust. Consult physician if eaten. Thoroughly wash hands with water after use. Flush eyes with clean water for at least 15 minutes if contents get into your eyes. Consult physician if you have any reaction to contents.

### KEEP AWAY FROM CHILDREN AND PETS
