

Real Flame® 13 oz Gel Fuel Can

**Read entire label and all instructions included with gel fuel and fireplace
Property damage, serious injury or death may result if these instructions
are not followed**

**When used as directed, Real Flame® gel fuels are safe to burn
indoors or outdoors**

Instructions for Use

- Shake can well.
- Contents may be under pressure. Open carefully. Place hand over lid and open away from you. Save lid for later use.
- Do not pour or scoop gel out of the can. Light Real Flame® gel fuel only when can is placed in the designated area in unit. Wipe up spills. Use a long match or extended butane lighter to ignite fuel.
- Never move or replace cans while they're burning. Cans get hot. If they are dropped or burning fuel is spilled, it could injure people or set surroundings on fire.
- Do not refill or add any kind of fuel to gel cans.
- Do not obstruct or inhibit the flame by placing anything in or over the can.
- Do not burn more than the maximum number of cans specified in the instructions included with your Real Flame® unit.
- To extinguish flame, wipe off excess gel on lid and replace lid upside down on can with a magnetic lid opener or tongs. Allow cans to cool for 20 minutes before touching them.
- Real Flame® gel fuel is made specifically for products designed and approved by Real Flame. Do not use in any other units.
- Use Real Flame® gel fuel within one year of purchase. Always store in a cool, dry place.

HAZARDS

- **Gel fuel is flammable. Failure to follow warnings can result in property damage or serious burns.**
- Do not attempt to pour gel or any other fuel on a fire that's still burning. Flare-ups or flashbacks could occur if you do. Allow unit to cool for 20 minutes after fire is out before moving fuel cans.
- Real Flame® gel fuel is tested for Real Flame® products only. Do not use Real Flame® fuel in any item not approved by Real Flame. Do not use any other type of fuel for any reason with Real Flame® products. Doing either could result in property damage or serious injury.
- Do not store or use near items that spark or near gasoline and other flammable materials, including gel fuel. An open flame or intense heat could ignite fuel or vapors that might leak and travel from these containers, which could start fires or cause the containers to explode.

In case of fire use a CO2 fire extinguisher or baking soda to extinguish flames

FIRST AID

Real Flame® Gel Fuel contains isopropyl alcohol.

Avoid contact with eyes, mucous membranes or prolonged contact with skin.

May irritate eyes. If gel gets in eyes, flush with water for 15 minutes; get medical

attention. If ingested, do not induce vomiting; call a poison control center or a doctor.
