

design **TOSCANO**[®]

**INSTRUCTIONS
FOR YOUR PRODUCT**

Thank you for your recent purchase of this Design Toscano hand-crafted garden fountain. We have taken great care to create this piece especially for you. Please review these instructions and assemble this piece with care.

A. Figurine

B. Finial

ASSEMBLY

Step One: Place fountain on the ground on a stable, level surface.

Step Two: Run the pump power cord through the PVC tube in the basin until it appears at the base of the fountain.

Step Three: Connect the tubing from pump cover finial with the pump and place the pump at the lowest part of the basin. Place finial over pipe in basin.

Step Four: Add water to the basin to fully submerge the pump. Connect the plug to a power supply.

Adjust the pump flow rate to achieve the desired effect and to minimize any splashing. Splashing can occur if the flow rate is too high or the feature is too full. The flow rate can be increased or decreased by moving the flow rate control slider on the pump body. Moving the switch towards (+) will increase the flow rate and moving it towards (-) will decrease it.

WARNING:

Never turn on the pump before the fountain is full of water. Also do not let the water level fall below the top of the pump as the pump will become damaged if run without water. Fountain should be placed on a level surface.
