

# Installation diagram:

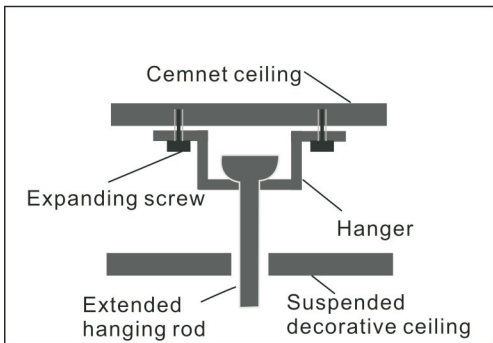

This is the standard installation with the hanger. Simple and convenient installation, which is the best installation if there is no suspended decorative ceiling for the room.

Diagram 1: Standard installation

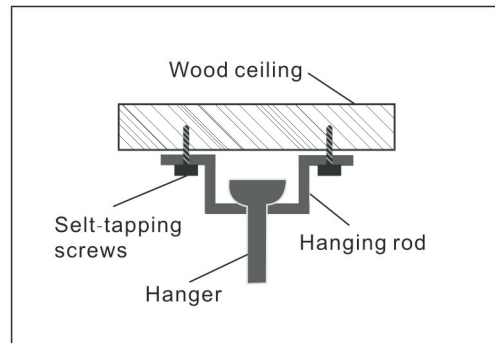

This is not the standard installation. You need to purchase the hanging hook (RMB20/set). If the hanging hook is too long, the installation box will not be flush with ceiling after installation. Consult our service before purchasing.

Diagram 2: Installation with hook

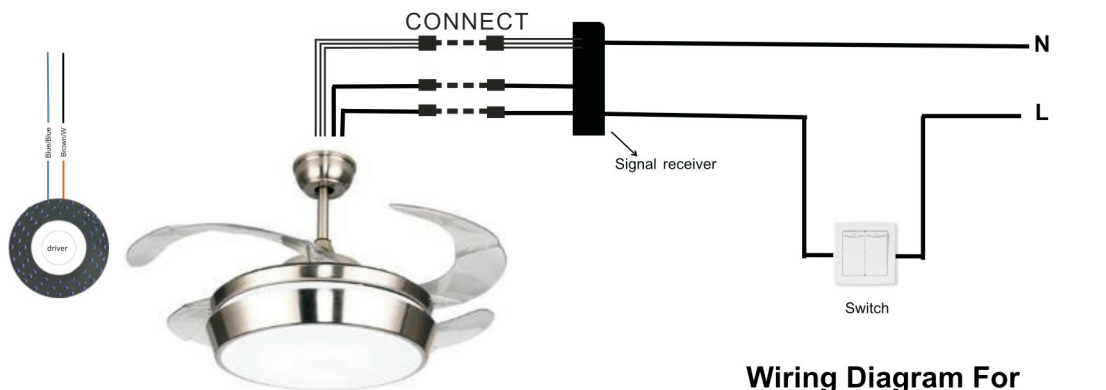

This is installation for suspended decorative ceiling. The bottom of the hanging rod should be at least 10cm lower than the ceiling. Extend the hanging rod depends on the situation. Consult our service before purchasing. (The fan blades should be at least 25cm lower than the ceiling, otherwise, the wind power will be influenced.)

Diagram 3: Installation with suspended decorative ceiling

This is installation for wood ceiling. The ceiling must have a bearing capacity of 30kgs with the wood thickness not less than 30mm. Remind to strengthen the wood at the position for light installation.
